## vii Course Overview

### 1 Unit 1: Introducing the Administration Course

3 Lesson: Exploring the Administration Course

### 5 Unit 2: Introducing Employee Central Payroll

7 Lesson: Defining Payroll Control Center

11 Lesson: Defining Employee Central Payroll Integration with Employee Central

### 17 Unit 3: Exploring Employee Payroll Data Management

18 Lesson: Validating Employee Payroll Data Replication

23 Exercise 1: View Replication Results and Resolve Issues

27 Lesson: Maintaining Additional Payroll Data for Employee Events

29 Exercise 2: Complete Tasks Based on a Hire

34 Lesson: Maintaining Additional Payroll Data using Infotype Mashups

37 Exercise 3: Maintain Payroll Information with Infotype Mash-Ups

### 41 Unit 4: Understanding Payroll Processes and Alert Resolution

43 Lesson: Configuring Policy Groups for Payroll Processes in Payroll Control Center

45 Exercise 4: Configure a Policy Group to Be Assigned to Payroll Processes

48 Lesson: Configuring One-Click Monitoring Payroll Processes in Payroll Control Center

49 Exercise 5: Create and Assign a Required Payroll Group Policy for One-Click Monitoring

52 Lesson: Configuring Teams for Payroll Processes in Payroll Control Center

53 Exercise 6: Configure a Team Associated to the Payroll Control Center Process

58 Lesson: Running One-click Monitoring Payroll Processes

61 Exercise 7: Run a One-Click Monitoring Process to Resolve Alerts or Technical Errors

67 Lesson: Running Production Payroll Processes

68 Lesson: Resolving Alerts Generated from the Payroll Process

71 Exercise 8: Assign an Alert to a Payroll Administrator

75 Exercise 9: Resolve an Alert and Verify the Results

81 Exercise 10: Run a Production Payroll Process

87 Lesson: Viewing Payroll Results

|            |                |                                                                                                   |

# Course Overview

## **TARGET AUDIENCE**

This course is intended for the following audiences:

- Data Manager
- Systems Architect
- Application Consultant
- Support Consultant
- End User
- Super / Key / Power User
- Business User
- Business Process Owner/Team Lead/Power User
- System Administrator

# UNIT 1

# Introducing the Administration Course

## Lesson 1

Exploring the Administration Course

3

### UNIT OBJECTIVES

- Describe general information about the course.

## Exploring the Administration Course

### LESSON OBJECTIVES

After completing this lesson, you will be able to:

- Describe general information about the course.

### Overview

Through the use of course materials, discussion, demonstration, and hands-on exercises, this course uses the concepts and terms associated with this SAP SuccessFactors product to help you develop a working knowledge, which you will use during and after implementation. While you complete this course, you will learn basic skills and how to use the tools in SAP SuccessFactors as a system administrator.

### Target Audience

This course is intended for SAP SuccessFactors system administrators (also referred to as admins) responsible for managing and administering this SAP SuccessFactors product.

#### Note:

Please note that **user** in this document refers to the end user. In the context of this guide, a user may be an HR administrator, manager, or employee, depending on your company's use of the modules.

#### Caution:

Some screenshots and certain features covered in this course may not be enabled in your company's environment. Customers do not have access to Provisioning, which is required to enable certain features and make major configuration changes. Therefore, you will need to contact an SAP SuccessFactors implementation consultant or SAP Support.

#### Note:

#### Reporting

Reporting is not part of this administration course. If you want to learn more about the different reporting tools available within SAP SuccessFactors, you can review the SAP SuccessFactors Platform: Reporting Administration course (HR882).

### Data Protection and Privacy Features

Various data protection and privacy features have been made available to our customers.

The data protection and privacy features include, for instance, the ability to report on employee personal data and personal data changes in the application.

Customers will also have options to configure data retention rules at the country level for active and inactive employees that will permanently purge personal data from SAP SuccessFactors applications.

It is the customer's responsibility to adopt the features that they deem appropriate. More information can be found in the [Implementing and Managing Data Protection and Privacy](#) guide.

### Summary

- Learners completing this course gain valuable insight and a working knowledge of SAP SuccessFactors that supports them during and after implementation.
- This course is intended for SAP SuccessFactors system administrators (also referred to as admins) responsible for managing and administering this SAP SuccessFactors product.
- Customers are responsible for adopting features deemed appropriate for their organization.

### LESSON SUMMARY

You should now be able to:

- Describe general information about the course.

## UNIT 2

# Introducing Employee Central Payroll

### Lesson 1

Defining Payroll Control Center

7

### Lesson 2

Defining Employee Central Payroll Integration with Employee Central

11

### UNIT OBJECTIVES

- Summarize the functionality of Payroll Control Center in SAP SuccessFactors Employee Central Payroll.
- Identify the components in the integration between SAP SuccessFactors Employee Central and Employee Central Payroll.

## Defining Payroll Control Center

### LESSON OBJECTIVES

After completing this lesson, you will be able to:

- Summarize the functionality of Payroll Control Center in SAP SuccessFactors Employee Central Payroll.

### Payroll and Payroll Cycle

#### What Is Payroll?

Payroll is the calculation of payment for work performed by each employee. Payroll comprises of a number of work processes, including the generation of payroll results and remuneration statements, the implementation of bank transfers, and the facilitation of check payments.

#### What Does a Normal Payroll Cycle Look Like?

During a payroll cycle, there are certain deadlines that must be met:

- The employee has to receive the payment not later than a fixed date (typically, the last working day of a payroll period).
- The tax declaration statement has to be submitted not later than a specific date.
- Based on these deadlines, the entire payroll processing window is defined in a backward termination way.
- In almost all cases, various iterations have to be done in order to get to a correct result. Typically, these iterations take the form of overnight batch jobs.
- So, what we see are payroll processes that are heavily influenced by a kind of batch thinking mentality.

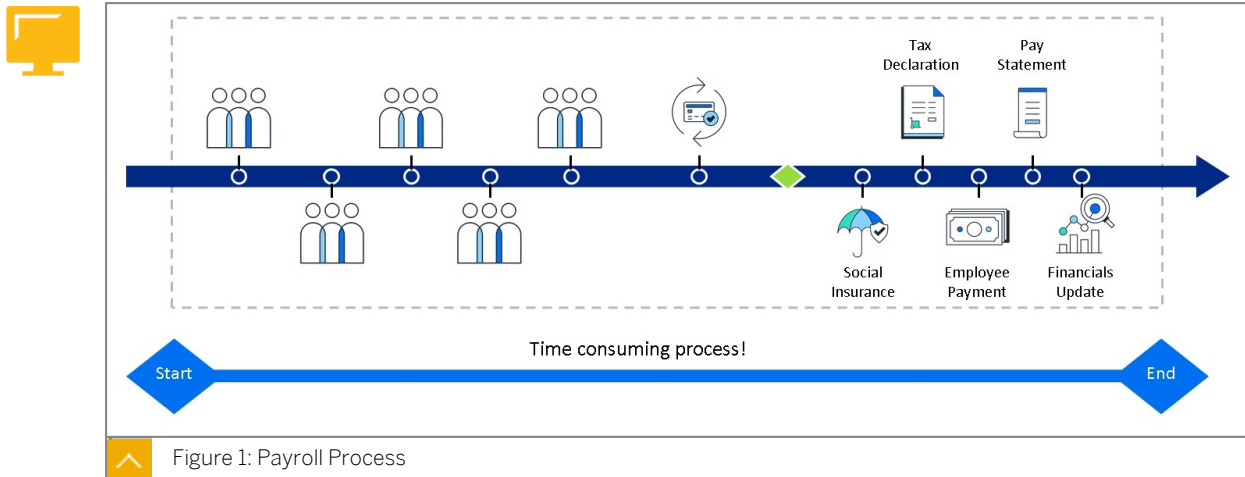

What makes this way of processing really time-consuming is the following:

- The later in the process a problem is found, the worse it gets as far as the time line goes.
- In this case, you have to go all the way back to the start, fix the problem, and then re-run the whole process.

After all this has been done, someone in a managerial role has to review and sign off that all the data is now in good shape.

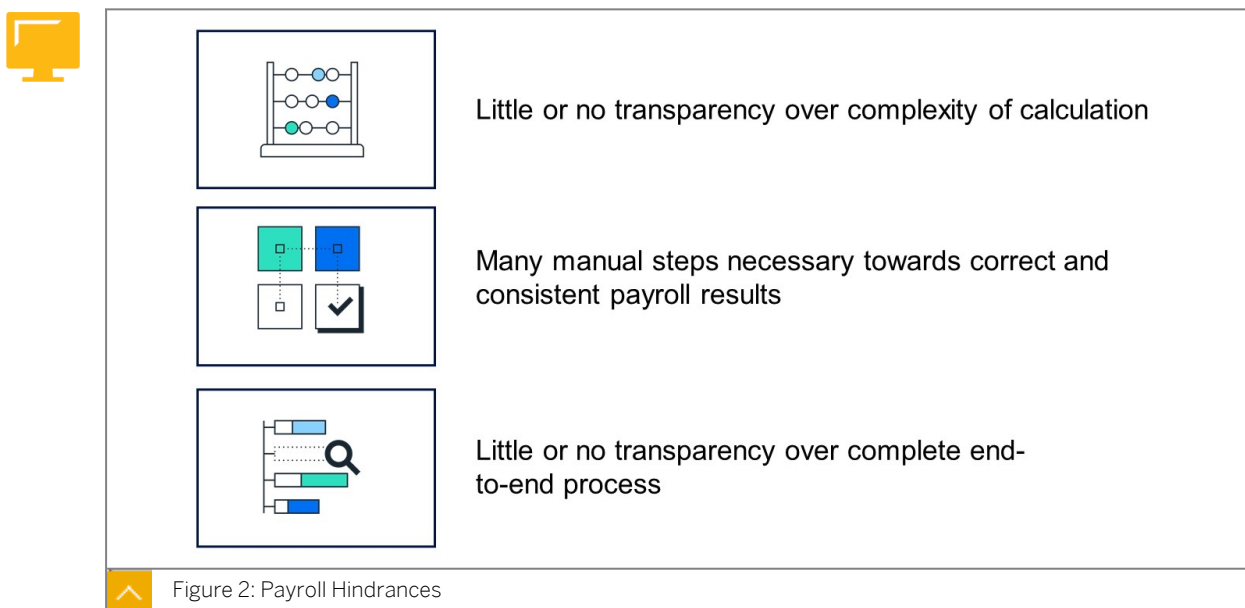

## Payroll Process

### Obstacles to Successful Payroll

To run a successful production payroll, your team needs many manual steps to get correct and consistent payroll results. Typically, you need large Microsoft Excel spreadsheets with process descriptions and the information on who has to do what and by when.

- Still, there is little or no transparency over the complete end-to-end process. For example, how do you get an overview of all your different weekly, bi-weekly, semi-monthly, or monthly payroll processes running at a certain point in time, and find out their status?
- You always get the same errors in every payroll period, and you wonder why they happen again and again, and no one has fixed the root cause or looked into the **why**.
- Also, different people often solve the same error in different ways, with different results and side effects.
- Finally, your experts possess a unique know-how on how to identify and solve a problem; if they leave, this know-how is gone, and you need to rebuild it.

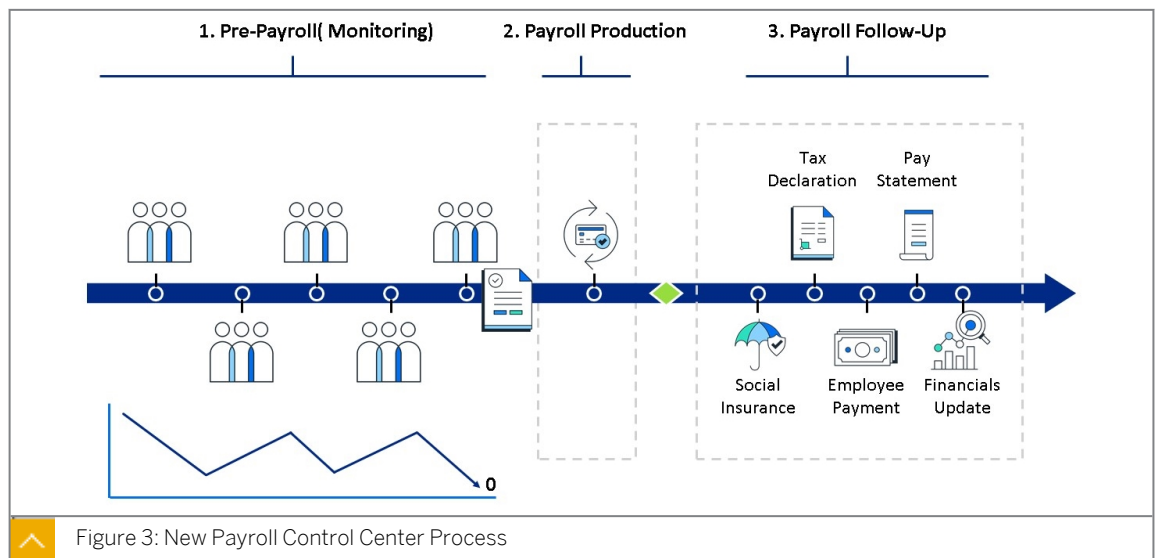

## Payroll Control Center and the New Payroll Control Center Process

### Payroll Control Center

Payroll Control Center is here to help you solve all these issues and to make the entire end-to-end payroll process simple and efficient.

### New Payroll Control Center Process

The basic and simple idea behind this is the following: Let's verify the data quality whenever there's a change to employee data. Such a **change event** can happen through an HR person changing master data or data being uploaded/imported through some other programs, etc. A so-called **policy** contains all the validation rules that tell us whether data quality for a specific payroll process is good or not. Whenever employee data is changed, *Payroll Control Center* finds out a change has happened and validates the policy for exactly those employees.

The figure below shows what the first stage of the Payroll Control Center Process, Pre-Payroll (Monitoring), looks like in the system.

The second most important stage of the Payroll Control Center Process, Payroll Production, is shown in the figure below.

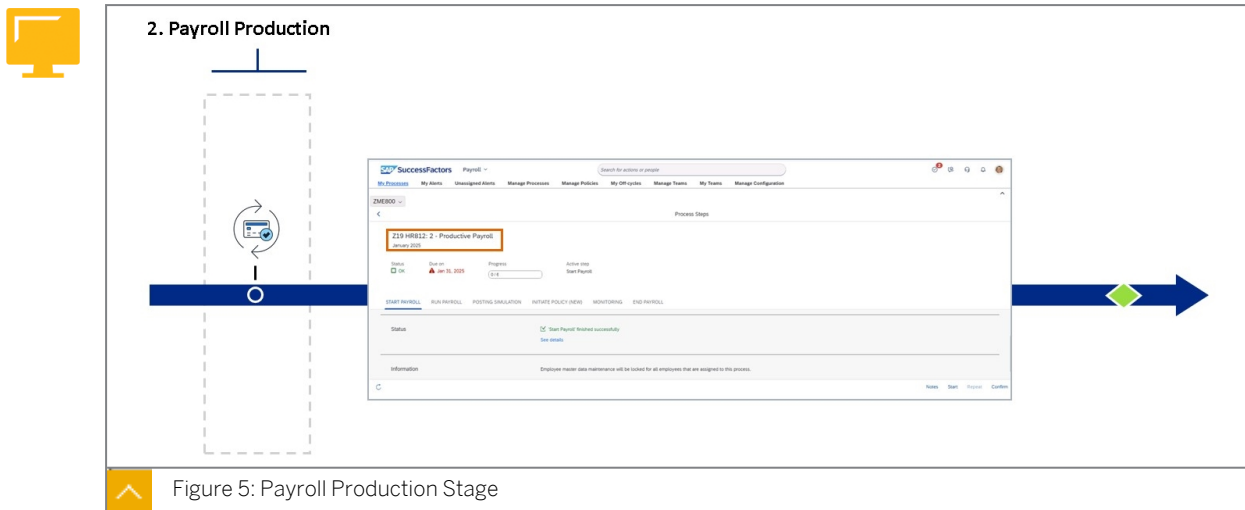

Figure 5: Payroll Production Stage

And finally, the last stage, Payroll Follow-Up, in the system looks like this:

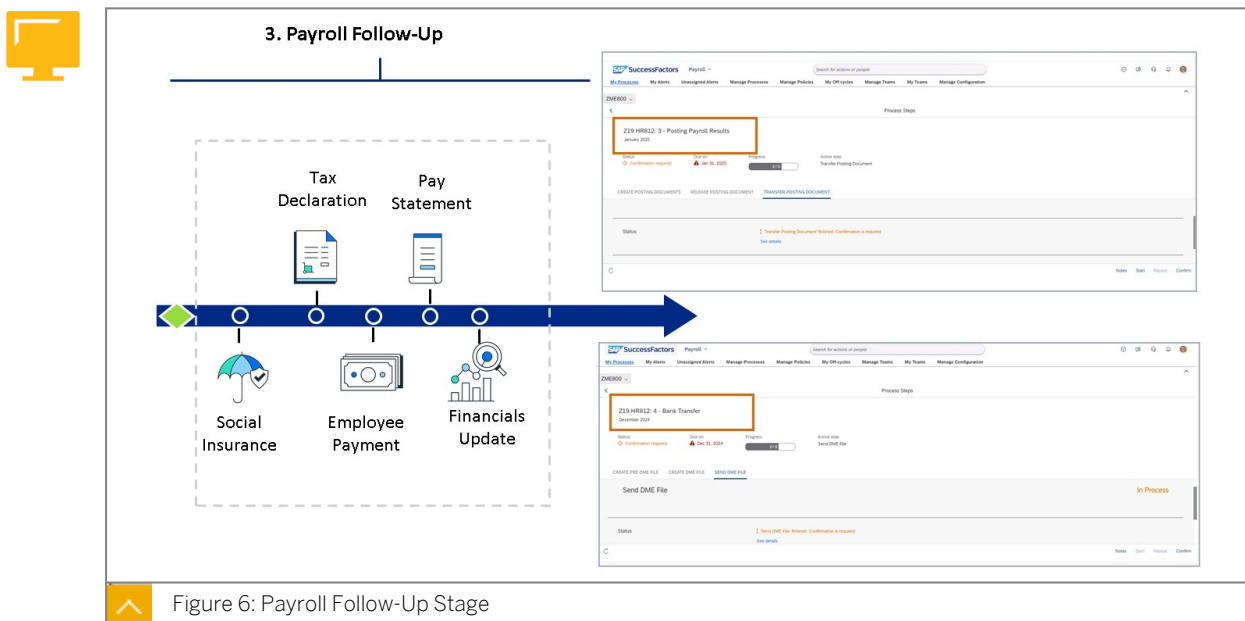

Figure 6: Payroll Follow-Up Stage

## LESSON SUMMARY

You should now be able to:

- Summarize the functionality of Payroll Control Center in SAP SuccessFactors Employee Central Payroll.

# Defining Employee Central Payroll Integration with Employee Central

## LESSON OBJECTIVES

After completing this lesson, you will be able to:

- Identify the components in the integration between SAP SuccessFactors Employee Central and Employee Central Payroll.

## Employee Central Payroll Components

### Payroll Control Center One-Click Monitoring

You can now include your expert teams in your payroll process, even in the very early stages. The teams look after the data quality for their specific area of expertise whenever data changes happen, and they make sure that you have perfect payroll data quality before your production payroll.

This brings us to the exact point where there is real innovation happening:

- This is what we call *One-Click-Monitoring*: We decouple the process of verifying the data quality for payroll from the production payroll.
- We allow users real-time insights into what we can expect from a payroll run in terms of data quality and accuracy, even before we produce it.
- We allow users to interact with the payroll system rather than sitting and waiting for the results of a batch run.
- There are no longer lists that people have to scan through to find out what's going on, whether things are good or bad; there are no longer multiple tools to double-check the system results.
- Through using the idea of policies, all know-how about when the payroll is ready is kept inside *Payroll Control Center*, and so is consistently used by everybody (including automated root cause analysis and error resolutions).
- We bring this all together in a new, modern, and fresh user experience, which is simple, easy to use, and focuses on the absolutely necessary things.

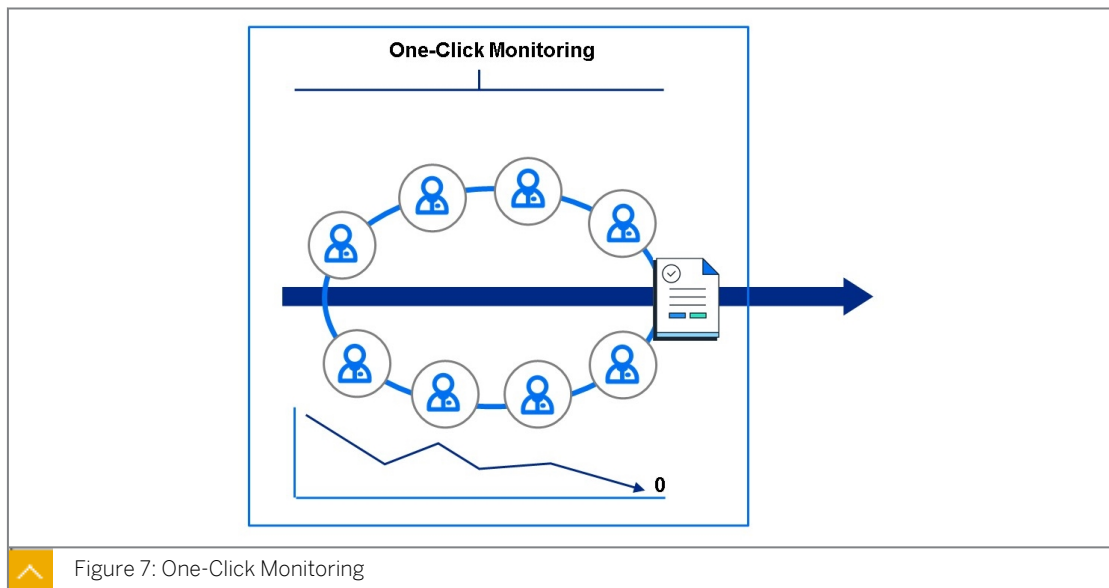

Figure 7: One-Click Monitoring

With *one-click-monitoring*, you now achieve full transparency of all your end-to-end HR and payroll activities at any time, not just during the critical path of production payroll processing. Finally, your production payroll is just three clicks away.

### Payroll Control Center Production Payroll

Once it is time to run production payroll, we can do so using the user interface and user experience of the Payroll Control Center. An example process is shown below:

#### 1. Start Payroll Production.

Production Payroll for all assigned employees will be started.

Master Data maintenance for all assigned employees will be locked until Production Payroll is finished.

Only selected Payroll administrators will be allowed to change the employee master data.

#### 2. Run Payroll.

Production Payroll results will be created.

#### 3. Simulate Payroll Posting.

A simulated result of transferring payroll data to the Accounting department will be generated. This will be used in the next steps to verify its accuracy.

#### 4. Run Payroll Data Validation.

The policies that are assigned to Payroll Production are executed. The results must be verified in the next step.

#### 5. Verify Payroll Data Quality.

Verify if there are policy deviations.

In case of policy deviations, assign them to the right people for correction.

#### 6. End Payroll Production.

Payroll Production for all assigned employees will be closed.

Master data maintenance for all assigned employees will be possible again.

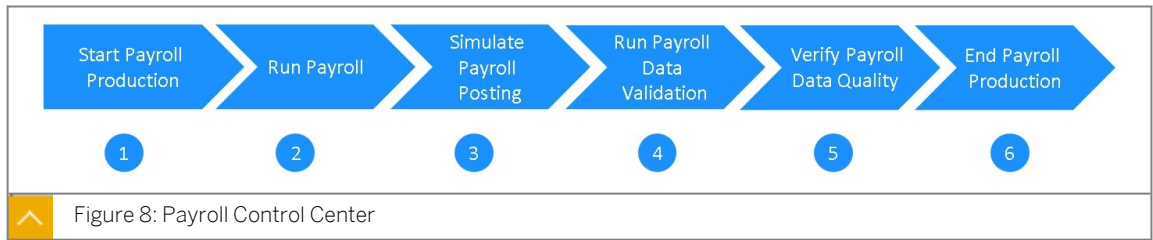

Figure 8: Payroll Control Center

The user interface for the Payroll Control Center Manager is shown below:

### Payroll Control Center: Manage Processes and Policies

*Simplified configuration* allows the payroll manager to maintain their processes and policies for the Payroll Control Center directly in the production environment without the need for IT intervention. This means that you do not need to move changes from Development to Test and then to Production. After a few clicks, changes to your payroll processes and policies are effective immediately. This functionality empowers the payroll manager and is delivered in the form of two new screens that are built directly into Employee Central.

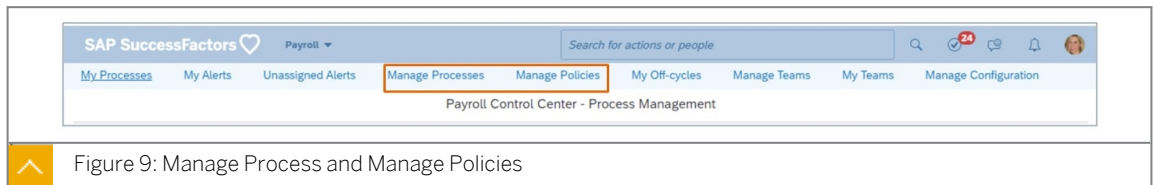

Figure 9: Manage Process and Manage Policies

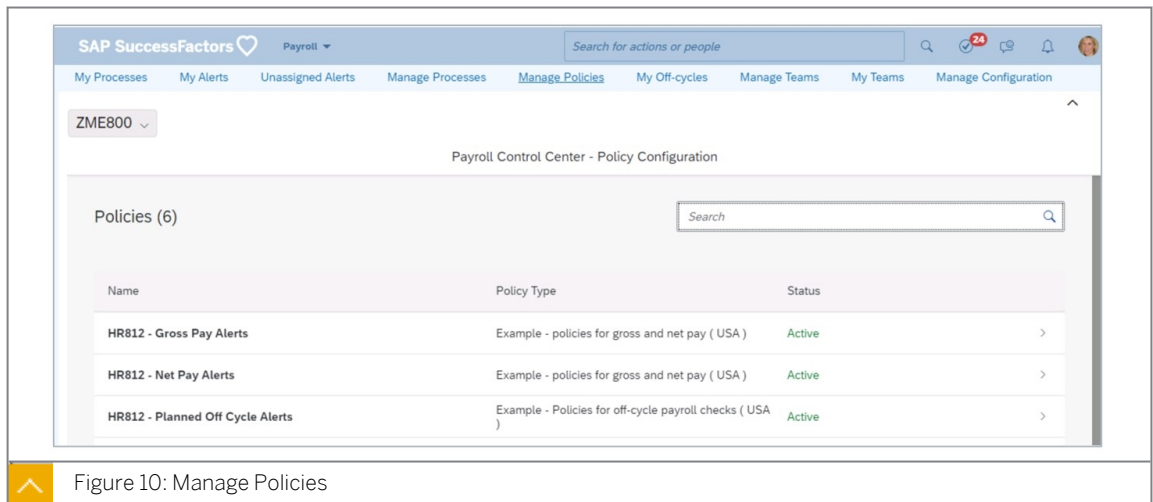

Figure 10: Manage Policies

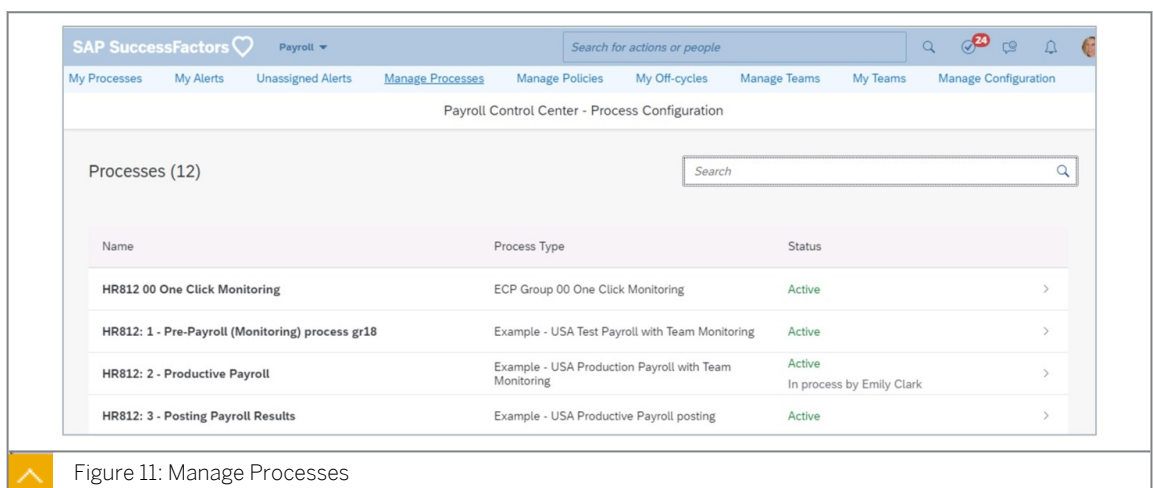

Figure 11: Manage Processes

## Payroll Control Center: My Off-Cycles

The payroll manager can run off-cycle processes using the *My Off-cycles* user interface. This functionality has been enhanced since the initial release with additional off-cycle reasons and notifications.

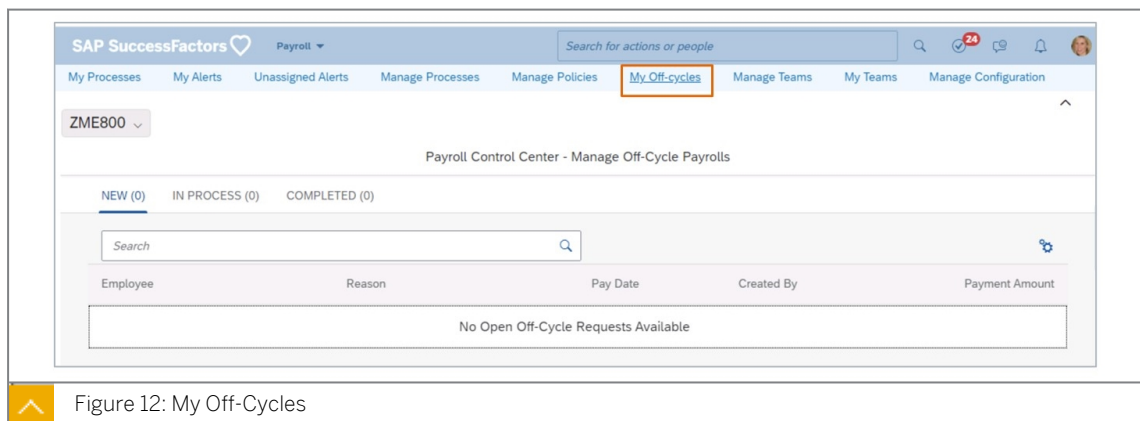

Figure 12: My Off-Cycles

## Employee Central Payroll Integration

### EC Payroll Integration: The Process

Employee and employment-related data is entered and stored in Employee Central. Hence, Employee Central is referred to as a master system for core HR. The data is replicated from Employee Central to Employee Central Payroll for payroll processing.

There is certain data that is not mastered in Employee Central, such as cost center data. Cost center data is created in an SAP Finance system and replicated to Employee Central and Employee Central Payroll. Once the cost center is replicated to Employee Central, it can be assigned to employees, and these assignments are then replicated to Employee Central Payroll. If required, time-related data, such as working times and absences, can be entered into Employee Central and replicated to Employee Central Payroll for payroll processing.

Additionally, there is information related to employees that is only required for payroll processing, such as employee tax information, social insurance, loans, garnishment, and so on. This data is stored in logically grouped fields called infotypes, for example, Tax infotype, Garnishment infotype, Loans infotype, and so on. Most of this information is country-specific data and relevant for payroll processing. This information is accessed via infotype mash-up in Employee Central.

#### Note:

In the case of a new hire or rehire, employee data should be replicated to Employee Central Payroll system first before infotype data is updated. The status of the employee replication can be checked in Data Replication Monitor.

Replication of employee and employment-related data, such as compensation data, personal data and job data, is replicated from Employee Central to Employee Central Payroll via the SAP-provided web service, known as point-to-point integration (PTP integration).

### Employee Data Changes

Employee data changes can be effective from a future date or can be applied retrospectively. These data changes are replicated as per the replication process and reflected in the

Employee Central Payroll system. In the case of a retrospective data change, how far back the data can be changed depends on the system configuration.

It is important to note that data replicated from Employee Central should only be changed in Employee Central and should not be changed manually in Employee Central Payroll.

### No-Show Hires

Some hired employees ignore their signed contracts and don't show up to start work. Because the person is technically hired in the system, you can consider them as a no-show and set their status to Inactive in Employee Central. When you report no-shows in Employee Central, the corresponding event reason is now transferred to your Employee Central Payroll system and processed there as a personnel action type. If an employee in Employee Central is marked as no-show, Employee Central Payroll sets the employee status to Inactive so that the changes are reflected in the payroll processing accordingly.

### Hire Date Correction Tool

**Note:**

One of the frequent tasks is to change the hire date for a new hire. Previously, this was a cumbersome process, but from the H2 2022 release, the standard hire date correction tool can be used to make changes to the hire date for both future date hire and for a backdated hire date.

### Access Control

Users' access to data is controlled using the role-based permission (RBP) framework in Employee Central. A user should have the necessary access in Employee Central and Employee Central Payroll to access, amend, or create employee data.

### LESSON SUMMARY

You should now be able to:

- Identify the components in the integration between SAP SuccessFactors Employee Central and Employee Central Payroll.

## UNIT 3

# Exploring Employee Payroll Data Management

### Lesson 1

|                                                         |    |
|---------------------------------------------------------|----|
| Validating Employee Payroll Data Replication            | 18 |
| Exercise 1: View Replication Results and Resolve Issues | 23 |

### Lesson 2

|                                                         |    |
|---------------------------------------------------------|----|
| Maintaining Additional Payroll Data for Employee Events | 27 |
| Exercise 2: Complete Tasks Based on a Hire              | 29 |

### Lesson 3

|                                                                 |    |
|-----------------------------------------------------------------|----|
| Maintaining Additional Payroll Data using Infotype Mashups      | 34 |
| Exercise 3: Maintain Payroll Information with Infotype Mash-Ups | 37 |

### UNIT OBJECTIVES

- Monitor results of data replication to verify success or resolve replication errors.
- Complete payroll tasks based on an event, such as hiring or promotion.
- Maintain specific payroll information by using infotype mash-ups.

# Validating Employee Payroll Data Replication

### LESSON OBJECTIVES

After completing this lesson, you will be able to:

- Monitor results of data replication to verify success or resolve replication errors.

### Data Replication Results

#### Payroll Data Replication

Data which is entered into Employee Central is replicated to the payroll system. New hire data must be replicated to the payroll system before additional payroll data, such as tax and garnishments, can be entered.

#### Note:

For a new hire, it is recommended that you enable the following in admin center:

- Country-specific validations for postal address of the home address of an employee
- National ID
- Bank account

#### Caution:

You cannot change the data that is part of the replication in the SAP ERP system. The relevant data is mentioned in this section. If data is changed, it will be overwritten during the next replication run.

The replication status for each employee can be monitored via *Data Replication Monitor*.

**SAP SuccessFactors Admin Center**

**Data Replication Monitor**

Employee: 2 Items | Replication Content Type: | Replication Target System: | Status: 4 Items | Replication Time: \* All Until Now

**Objects (2)**

| Object Name                 | Replication Content Type | Status     | Messages                     | Last Replicated          | Replication Scheduled For |
|-----------------------------|--------------------------|------------|------------------------------|--------------------------|---------------------------|
| Phil Rosee<br>ECPEE00       | Employee Master Data     | Successful |                              | Feb 21, 2023, 3:28:14 PM |                           |
| Mark Brown<br>ECPEmployee12 | Employee Master Data     | Failed     | (1) For payment method Ba... | Feb 21, 2023, 3:25:27 PM |                           |

Figure 13: Data Replication Monitor Sample Views

You can find the *Data Replication Monitor* in the *Admin Alerts* tile under *Payroll Integration*.

**SAP SuccessFactors Admin Center**

**Admin Alerts**

Admin Alert Type: Employee Master Data (21)

**HR Data Issues**

- Invalid Dynamic Role Users (1)
- Job Information Issues (52)

**Employee Central Payroll and SAP ERP Integration**

- Planned Working Time (0)
- Onboarding Compliance Forms (0)
- Employee Master Data (21)
- Time Pay Components (0)
- Absences to Time Off (0)
- Employee Absence Data (0)
- Employee Organizational Assignment (0)

Figure 14: Payroll Integration

## Data Replication Monitor

**Note:**

Tip: There is more information about replication of master data in the Employee Central Payroll implementation handbook.

## Display Options

There is a wide range of options that you can choose from to display exactly the information that you need in the Data Replication Monitor.

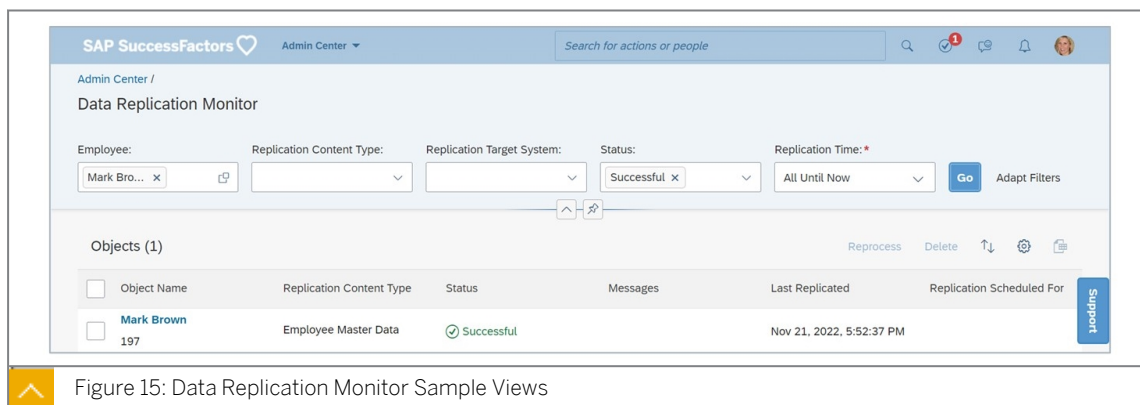

Figure 15: Data Replication Monitor Sample Views

- Choose the employee's name to see the respective employee file.
- Trigger replication manually by selecting *1 or more employees* and choosing *Reprocess*.
- Delete entries that you no longer need for monitoring, for example, because they were created during a test phase.

### Standard and Extended Views

#### Note:

If you have *Admin Alerts 2.0* enabled, you will automatically see data replication alerts there. Additionally, eligible administrators can assign time-data replication errors to themselves or other administrators.

## Reviewing Replication Status in the Full Profile

### Enhancing Payroll Data Visibility with the Payroll Replication Details Card

As of the 1H 2026 release, payroll administrators can validate employee payroll data replication directly from the Employee Central profile using the Payroll Replication Details Full Profile card.

#### Access and Availability

The Payroll Replication Details card is available only to administrators and is accessed via the Employee Central People Profile (Full Profile). By navigating to an employee's profile, administrators can view payroll-relevant replication information without switching to separate monitoring tools. This integrated access simplifies daily payroll monitoring and supports efficient pre-payroll validation activities.

#### Purpose of the Payroll Replication Details Card

The card provides a consolidated overview of the replication status and history of employee master data and time-related data transferred from SAP SuccessFactors Employee Central to Employee Central Payroll. By reviewing this information directly from the employee profile, administrators can quickly determine whether data replication has completed successfully before payroll processing begins.

#### Information Displayed on the Card

From the Employee Central profile, the card displays the most recent execution date, time, and status for the following replication processes:

- Last Employee Master Data Replication

- Last Employee Absence Data Replication
- Last Absences to Time Off Replication
- Last Planned Working Time Replication
- Last Time Pay Components Replication

For each replication type, the system shows the date and time of the latest replication, enabling administrators to verify data freshness at a glance.

### **Replication Statuses**

Each replication entry can show one of the following statuses:

- Successful – The data was replicated correctly without errors.
- Pending – The replication process has started but is not yet complete.
- Failed – An error occurred during replication that requires administrator investigation.
- Awaiting Processing – The data is queued and waiting for the next available replication cycle.

These statuses help administrators quickly identify data replication issues that might impact payroll accuracy.

### **Drill-Down to Monitoring Tools**

From the Payroll Replication Details card on the Employee Central profile, administrators can navigate directly to the Data Replication Monitor using the provided link. This supports detailed analysis, error investigation, and follow-up actions when replication issues are detected.

### **Key Benefits for Payroll Administrators**

By using the Payroll Replication Details card, payroll administrators can verify that payroll-relevant employee and time data has replicated correctly, detect issues early in the payroll cycle, and reduce manual checks across multiple tools. This update will help you manage data more efficiently, make informed decisions, and increase productivity.

# View Replication Results and Resolve Issues

Note:

#### Training System Performance.

We recommend that you delete your internet cache occasionally. This will improve the training system performance.

Emily Clark is an administrator for Employee Central Payroll. To view replication results and to resolve issues, she navigates to the Data Replication Monitor. Emily wants to look for rejected employees, which are listed as objects.

By selecting the related message for an employee, a popup window appears, providing more details about the type of error. For Mark Brown ##, where ## is your group number, the *Account number* is missing in payment info.

Emily enters the missing data and verifies the result.

Note:

The distribution of tasks among responsible persons varies significantly across companies and can be flexibly configured in the system using roles and permissions. In this example, the payroll administrator can maintain employee payment information, including bank details, based on the permissions granted to their role.

Note:

The course's practical exercises and demonstrations are based on the US country-specific version. Still, the business processes, process steps, applications, and tools discussed in the course are universal for all countries.

1. Open the Data Replication Monitor, select employee Mark Brown ##, identify the related issue, and open the People Profile.
2. On the payment information tile, ensure that the bank country is set to USA and that the bank is Chase Manhattan Bank. Complete the missing information if necessary. Enter the missing account number **1234**. In the *Payment Information* screen area, choose *Payment information history*, enter the account number, and save the account number.
3. Verify that the data replication is successful in Data Replication Monitor. In the Replication Details, choose *Reprocess* and confirm. Change the data replication monitor status. Replication is successful and Mark Brown## disappears from the screen.

# View Replication Results and Resolve Issues

Note:  
**Training System Performance.**

We recommend that you delete your internet cache occasionally. This will improve the training system performance.

Emily Clark is an administrator for Employee Central Payroll. To view replication results and to resolve issues, she navigates to the Data Replication Monitor. Emily wants to look for rejected employees, which are listed as objects.

By selecting the related message for an employee, a popup window appears, providing more details about the type of error. For Mark Brown ##, where ## is your group number, the *Account number* is missing in payment info.

Emily enters the missing data and verifies the result.

Note:  
The distribution of tasks among responsible persons varies significantly across companies and can be flexibly configured in the system using roles and permissions. In this example, the payroll administrator can maintain employee payment information, including bank details, based on the permissions granted to their role.

Note:  
The course's practical exercises and demonstrations are based on the US country-specific version. Still, the business processes, process steps, applications, and tools discussed in the course are universal for all countries.

1. Open the Data Replication Monitor, select employee Mark Brown ##, identify the related issue, and open the People Profile.
  - a) In the *Action Search*, enter **Data Replication Monitor** and choose it. You see employees that are listed as objects with status failed, including messages.
  - b) Select the message for Mark Brown ## and choose *Go to People Profile*. Note that the message already displays the issue: a missing account number!
2. On the payment information tile, ensure that the bank country is set to USA and that the bank is Chase Manhattan Bank. Complete the missing information if necessary. Enter the missing account number **1234**. In the *Payment Information* screen area, choose *Payment information history*, enter the account number, and save the account number.

- a) Choose the *Personal data* section.
  - b) Scroll down and choose the *Payment Information* tile.
  - c) In the *Payment Information* screen area, choose the clock icon for the *Payment information history* and choose *Edit*.
  - d) Update the date in the *When should these changes take effect?* field to January 1 of the current year
  - e) In the *Bank Country/Region* field, select **USA**.
  - f) In the *Bank* field, select Chase Manhattan Bank.
  - g) In the *Account Number* field, enter **1234**. Save this entry. Close the *Payment information: Changes* screen.
3. Verify that the data replication is successful in Data Replication Monitor. In the Replication Details, choose *Reprocess* and confirm. Change the data replication monitor status. Replication is successful and Mark Brown## disappears from the screen.
- a) Open the replication details for Mark Brown ## in the Data Replication Monitor.
  - b) Select *Reprocess* and confirm the message by selecting *Reprocess* again.
  - c) In the *Status* field, select *Successful*. Deselect *Pending* and *Failed* and choose *Go*. Result: data replication for Mark Brown ## is successful.
  - d) To return to the Employee Central homepage, choose *SAP SuccessFactors*. This concludes the exercise.

### **LESSON SUMMARY**

You should now be able to:

- Monitor results of data replication to verify success or resolve replication errors.

## Maintaining Additional Payroll Data for Employee Events

### LESSON OBJECTIVES

After completing this lesson, you will be able to:

- Complete payroll tasks based on an event, such as hiring or promotion.

### The Use of Payroll Unified Configuration

#### The End-To-End Payroll Process.

The end-to-end payroll process is a simple, integrated, and transparent approach to help payroll administrators efficiently navigate Employee Central. There are several events during the employee life cycle, such as hiring, promotion, transfer, and termination, that require the creation or change of the payroll-relevant data. There is specific payroll-related data that is not stored in Employee Central but is stored in infotypes within the Employee Central Payroll system.

#### Infotypes

Infotypes must be maintained before payroll can run successfully. Each country/region has a different set of infotypes that you must keep for the successful payroll run.

#### The Payroll Tasks quick card

Figure 16: Payroll Tasks Quick Card

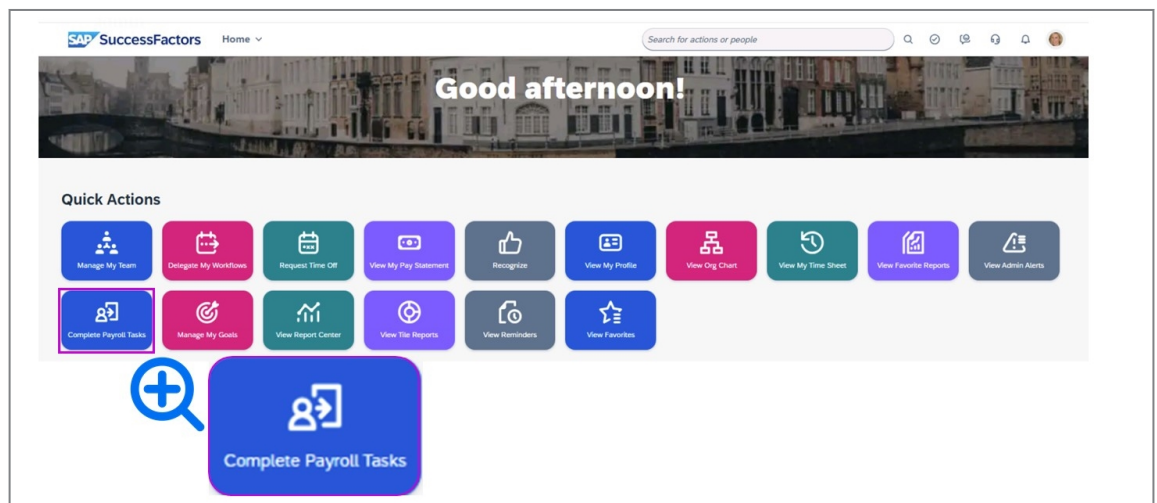

Figure 17: Payroll Tasks: Complete Payroll Tasks Screen

The standard system is configured to generate these as tasks for payroll administrators. To increase efficiency, these tasks are displayed on a quick card called *Payroll Tasks* on the home page. The payroll administrator can navigate to this quick card on the homepage and select the relevant employee to complete the mandatory infotypes. Based on the configuration, all relevant infotypes will be available to the payroll administrator for completing the tasks.

**Note:**

The standard system is set in a way that all payroll task objects with an *Open* or *In Process* status are displayed on the quick card. If there are no open payroll tasks, the *Complete Payroll Tasks* quick card isn't displayed on the home page.

However, you can access the page at any time. To do so, go to the admin center and search for **Complete Payroll Tasks**. You can sort the list of employees based on Effective Date, Employment Name, and Task Type in ascending or descending order by using the sorting arrow. When you click through each employee, you can view the following information: Manager, Initiated By Event, Task Description, Status, and Effective from.

Previously, it was not possible to save filter selections on the Complete Payroll Tasks page. You had to choose the required filters each time you accessed the page. With the 2H 2025 update, the system saves your filter selections. This change reduces the time and effort needed for your tasks.

This feature utilizes the variant management functionality, which allows you to save your filter selections within the **My Views** dialog box on the **Complete Payroll Tasks** page. You can also edit, rename, and delete the saved filter selections if required.

## Unit 3

### Exercise 2

## Complete Tasks Based on a Hire

Emily Clark is an administrator for Employee Central Payroll. To complete payroll tasks for a new hire, she accesses Employee Central. Emily wants to add all payroll-related information to newly hired employees, which is mandatory for payroll process execution.

Note:

This exercise is based on a scenario which is common for the USA. The infotypes that are configured here are required, or at least, they are useful.

1. On the Employee Central Home Page, Emily chooses the *Payroll Tasks* quick card.
2. For Mark Brown ##, maintain the *Residence Tax Area* infotype, IT0207, as of January 1 in the current year.
3. Maintain the *Work Tax Area* infotype, IT0208, with the following data:

| Field name            | Value                    |
|-----------------------|--------------------------|
| Valid From/To         | 01/01 current year       |
| Tax area              | CA (State of California) |
| Allocation Percentage | 100                      |

4. Maintain the *Unemployment State* Infotype, IT0209.

| Field name    | Value                    |
|---------------|--------------------------|
| Valid from    | 01/01 current year       |
| Tax authority | CA (State of California) |

5. Maintain the *Withholding Information* Infotype IT0210 with the following data.

| Field name     | Value              |
|----------------|--------------------|
| Valid From/To  | 01/01 current year |
| Tax authority  | FED                |
| Filling status | 01 (Single)        |

| Field name           | Value |
|----------------------|-------|
| Number of allowances | 5     |

6. Close data maintenance by choosing *Done*. Result: Mark Brown ## is no longer listed as an employee in the *Complete Payroll Tasks* list on the left.
7. Verify the completion of data maintenance. Select all filters for this check.

### Complete Tasks Based on a Hire

Emily Clark is an administrator for Employee Central Payroll. To complete payroll tasks for a new hire, she accesses Employee Central. Emily wants to add all payroll-related information to newly hired employees, which is mandatory for payroll process execution.

Note:

This exercise is based on a scenario which is common for the USA. The infotypes that are configured here are required, or at least, they are useful.

1. On the Employee Central Home Page, Emily chooses the *Payroll Tasks* quick card.
  - a) On the Employee Central Home Page, from the *Quick Actions*, choose the *Payroll Tasks* quick card. All newly hired employees for which payroll information is to be completed are displayed.
2. For Mark Brown ##, maintain the *Residence Tax Area* infotype, IT0207, as of January 1 in the current year.
  - a) In the search area from the left pane, search for **ECP-EMP-##** or **Mark Brown ##**. Make sure to add a space before ##!
  - b) Select Mark Brown ##.
  - c) On the *Residence Tax Area* tab, choose *New*.
  - d) In the *Valid From/To* field, enter **01/01/xxxx**, where **xxxx** is the current year, and save the entry with default value FED (Federal). Even if you get the *Caution* hint, choose *Continue Anyway*.
3. Maintain the *Work Tax Area* infotype, IT0208, with the following data:

| Field name            | Value                    |
|-----------------------|--------------------------|
| Valid From/To         | 01/01 current year       |
| Tax area              | CA (State of California) |
| Allocation Percentage | 100                      |

- a) Use the information in the table.
4. Maintain the *Unemployment State* Infotype, IT0209.

| Field name | Value              |
|------------|--------------------|
| Valid from | 01/01 current year |

| Field name    | Value                    |
|---------------|--------------------------|
| Tax authority | CA (State of California) |

a) Use the information in the table.

5. Maintain the Withholding Information Infotype IT0210 with the following data.

| Field name           | Value              |
|----------------------|--------------------|
| Valid From/To        | 01/01 current year |
| Tax authority        | FED                |
| Filling status       | 01 (Single)        |
| Number of allowances | 5                  |

a) Choose the *Withholding Information* tab and choose *New*.

b) In the *Tax Authority* field, select *FED* for Federal from the results list.

c) In the *Filling status* field, select *01 Single* from the results list.

d) Choose the *Allowance Withholding (Original)* radio button in the *Withholding Format* area.

e) In the *Number of Allowances* field, enter **5**.

f) Save your entry. If you get the *Caution* hint, then choose *Continue Anyway*.

6. Close data maintenance by choosing *Done*. Result: Mark Brown ## is no longer listed as an employee in the *Complete Payroll Tasks* list on the left.

7. Verify the completion of data maintenance. Select all filters for this check.

a) Choose the *Filter* icon.

b) Select *Closed* in addition to the already used filters and choose *OK*.

c) Confirm by searching for **ECP-EMP-##** in the search box. Result: Mark Brown ## is listed again as employee in the *Complete Payroll Tasks* list on the left, with status as *Closed*.

## LESSON SUMMARY

You should now be able to:

- Complete payroll tasks based on an event, such as hiring or promotion.

## Maintaining Additional Payroll Data using Infotype Mashups

### LESSON OBJECTIVES

After completing this lesson, you will be able to:

- Maintain specific payroll information by using infotype mash-ups.

### The Use of Infotype Mash-Ups

#### The Requirement of Maintaining Additional Payroll-Relevant Data for an Employee

. As stated earlier, for payroll to run correctly in Employee Central Payroll, the HR/payroll administrator must maintain additional payroll-relevant data for each employee. Some data, such as tax information, is required to process the payroll runs. Other data, such as loans, garnishments, or additional tax details, are not mandatory for a successful payroll run. If relevant to the employee, this data will impact the payroll result.

There are business use cases when these infotypes need to be maintained even though they are not related to a specific employee lifecycle event. An example could be maintaining Garnishment for an employee.

#### Infotype Mash-Up

This information is maintained via Infotype mash-up. The maintenance of payroll-specific data is done directly in Employee Central Payroll infotypes. These infotype screens are integrated into the Employee Central system, also called mash-ups, and are accessed via Employee Files in Employee Central. Data maintained via the infotype mash-up screen is saved directly in Employee Central Payroll.

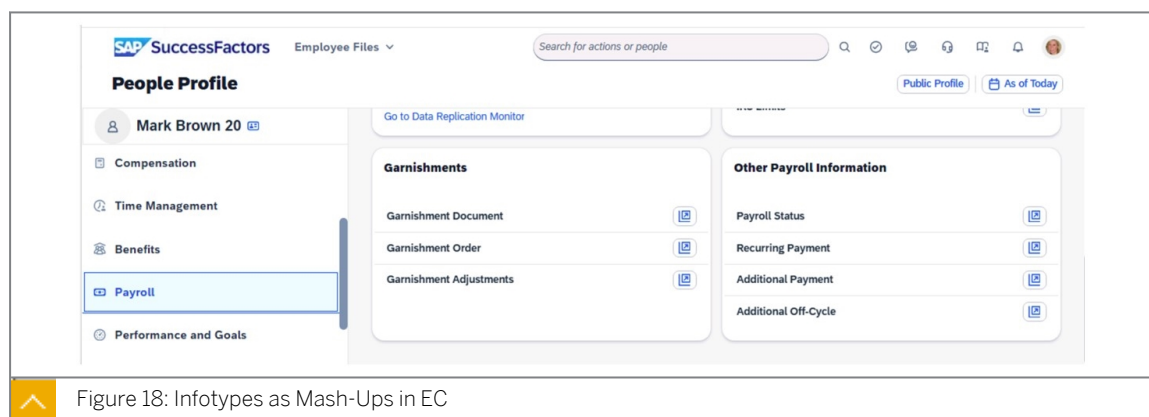

Figure 18: Infotypes as Mash-Ups in EC

**Note:**

A user requires permissions in Employee Central, as well as infotype-specific permissions in Employee Central Payroll, to maintain the data using either of the two methods mentioned here.

**Payroll Data Viewing in Full Profile.***Payroll Information Cards.*

The *Payroll Information Cards* provide employees with a clearer, card-based view of their payroll data. Each category of information—such as Tax, Social Insurance, Earnings, and Deductions is displayed on its own card, allowing for easier review and navigation. Administrators can also access and view employees' cards.

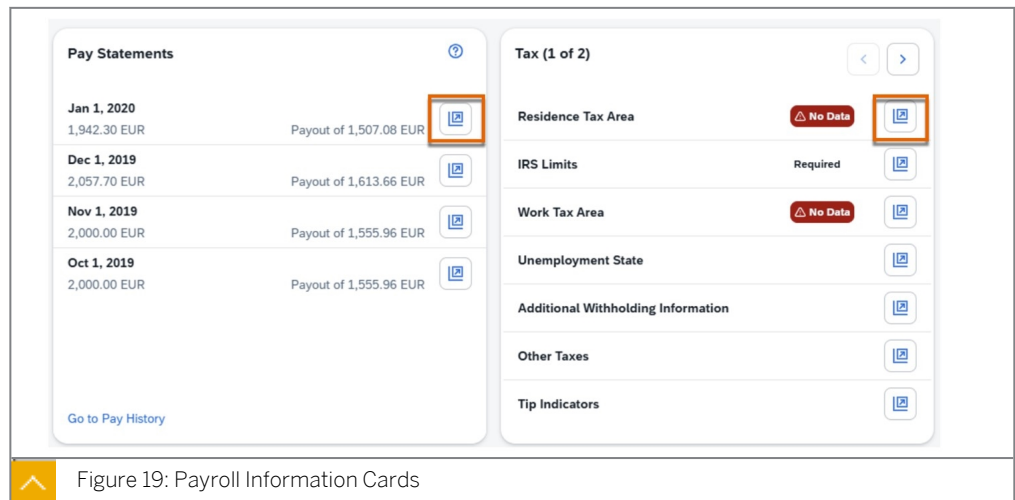

Figure 19: Payroll Information Cards

*Payroll Replication Details Card.*

The Payroll Replication Details Card helps administrators monitor employee master data replication.

It shows:

- The status of the last replication (Successful, Pending, Failed, or Awaiting Processing).
- The date and time of the last replication.
- A direct link to the Data Replication Monitor for quick follow-up

# Maintain Payroll Information with Infotype Mash-Ups

For employee Mark Brown ##, a new garnishment is added by Emily Clark. This is done with mashups.

Note:

In this example, the mashups are specific for the USA.

In Employee Central (EC), Emily has to insert the garnishment order, infotype 0195, for Mark Brown ##.

Emily opens the employee's Full People Profile. From the list of profile sections on the left, selects Payroll, and then choose the Garnishments tile.

Next she selects the icon to the right of Garnishment Document option. She clicks the link *New*, enters all mandatory information, and saves the infotype.

1. In EC, Emily has to insert the garnishment order, infotype 0195, for Mark Brown ##.
2. On the the *Payroll* section, display all information, and create a new record on infotype 0194, Garnishment Document. Use the information in the table in the solution.
3. Emily has to insert the garnishment order, infotype 0195, from the available *Employee Mashups*. To continue, Emily returns to the Full People Profile and selects the icon next to the Garnishment Order option. On the next screen she chooses *New*, enters all the following mandatory information, and then saves the infotype. Use the information in the table in the solution.

# Maintain Payroll Information with Infotype Mash-Ups

For employee Mark Brown ##, a new garnishment is added by Emily Clark. This is done with mashups.

Note:

In this example, the mashups are specific for the USA.

In Employee Central (EC), Emily has to insert the garnishment order, infotype 0195, for Mark Brown ##.

Emily opens the employee's Full People Profile. From the list of profile sections on the left, selects Payroll, and then choose the Garnishments tile.

Next she selects the icon to the right of Garnishment Document option. She clicks the link *New*, enters all mandatory information, and saves the infotype.

1. In EC, Emily has to insert the garnishment order, infotype 0195, for Mark Brown ##.
  - a) In the *Action Search* in EC, enter **Mark Brown ##** and select him. This opens Mark's employee profile.
2. On the the *Payroll* section, display all information, and create a new record on infotype 0194, Garnishment Document. Use the information in the table in the solution.
  - a) Choose the *Payroll* section.
  - b) To create a new garnishment, select *Garnishment Document* and then choose *New* to create a new record on infotype 0194 - *Garnishment Document*. Enter the following data, save your entries, and confirm the warning message.

| Field Name              | Entry                                      |
|-------------------------|--------------------------------------------|
| Valid from/to           | 01/01/xxxx, where XXXX is the current year |
| Garnishment Case Number | Enter <b>7621983</b>                       |
| Vendor                  | 101                                        |
| Date received           | 01/14/xxxx                                 |
| Priority                | 100                                        |
| Jurisdiction            | New Jersey                                 |
| Document category       | Support                                    |

| Field Name      | Entry                |
|-----------------|----------------------|
| Remittance rule | Immediate remittance |

3. Emily has to insert the garnishment order, infotype 0195, from the available *Employee Mashups*. To continue, Emily returns to the Full People Profile and selects the icon next to the Garnishment Order option. On the next screen she chooses *New*, enters all the following mandatory information, and then saves the infotype. Use the information in the table in the solution.

- a) Choose the *Garnishment* tile and select *Garnishment Order*.
- b) Choose *New*. Enter the following data, save your entries, and confirm the warning message.

| Field Name                             | Entry                                                             |
|----------------------------------------|-------------------------------------------------------------------|
| Valid from/to                          | 01/01/xxxx, where XXXX is the current year                        |
| Internal Garnishment Number            | Select from picklist: 0001 (defined in the previous infotype)     |
| Rule for Calculating Non-exempt amount | remove default value                                              |
| Garnishment Order Type                 | AL - Alimony                                                      |
| Deduction                              | insert amount = 150.00 with frequency<br><i>Pay period amount</i> |

- c) Choose *Back* to return first to the employee profile of Mark Brown ## and then to the EC Home Page. This concludes this exercise.

### **LESSON SUMMARY**

You should now be able to:

- Maintain specific payroll information by using infotype mash-ups.

# UNIT 4

# Understanding Payroll Processes and Alert Resolution

## Lesson 1

|                                                                           |    |
|---------------------------------------------------------------------------|----|
| Configuring Policy Groups for Payroll Processes in Payroll Control Center | 43 |
| Exercise 4: Configure a Policy Group to Be Assigned to Payroll Processes  | 45 |

## Lesson 2

|                                                                                        |    |
|----------------------------------------------------------------------------------------|----|
| Configuring One-Click Monitoring Payroll Processes in Payroll Control Center           | 48 |
| Exercise 5: Create and Assign a Required Payroll Group Policy for One-Click Monitoring | 49 |

## Lesson 3

|                                                                               |    |
|-------------------------------------------------------------------------------|----|
| Configuring Teams for Payroll Processes in Payroll Control Center             | 52 |
| Exercise 6: Configure a Team Associated to the Payroll Control Center Process | 53 |

## Lesson 4

|                                                                                      |    |
|--------------------------------------------------------------------------------------|----|
| Running One-click Monitoring Payroll Processes                                       | 58 |
| Exercise 7: Run a One-Click Monitoring Process to Resolve Alerts or Technical Errors | 61 |

## Lesson 5

|                                      |    |
|--------------------------------------|----|
| Running Production Payroll Processes | 67 |
|--------------------------------------|----|

## Lesson 6

|                                                        |    |
|--------------------------------------------------------|----|
| Resolving Alerts Generated from the Payroll Process    | 68 |
| Exercise 8: Assign an Alert to a Payroll Administrator | 71 |

| Exercise 10: Run a Production Payroll Process          | 81 |

## Lesson 7

|                         |    |
|-------------------------|----|
| Viewing Payroll Results | 87 |
|-------------------------|----|

## UNIT OBJECTIVES

- Configure a policy group to be assigned to payroll processes.

- Configure a one-click monitoring process to identify errors and alerts prior to production payroll.
- Configure a team associated to the Payroll Control Center process.
- Run a one-click monitoring process to resolve any alerts or technical errors.
- Describe the production payroll process to create payroll results.
- Resolve alerts that are generated from the payroll process.
- Describe options for Viewing Payroll Results.

# Unit 4

## Lesson 1

## Configuring Policy Groups for Payroll Processes in Payroll Control Center

### LESSON OBJECTIVES

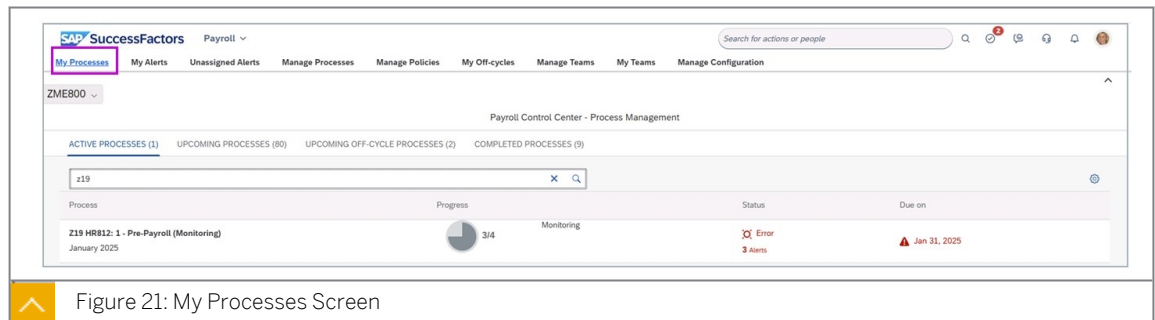

After completing this lesson, you will be able to:

- Configure a policy group to be assigned to payroll processes.

### Configuration of Payroll Processes in Payroll Control Center

#### Payroll Process

#### My Processes (Process Management)

As you know, a payroll process involves the following set of activities to be completed. These are sequential steps.

- Running the payroll
- Running company policies
- Running compliance checks
- Posting of payroll results to finance successfully
- Sending the payment files to banks for the payment of salaries

With the *My Process* application within Employee Central Payroll, a payroll process manager can execute and monitor the complete payroll process.

There are different categories of processes, such as the monitoring process, the production payroll process, the off-cycle process, the ad hoc off-cycle process, and so on.

These processes improve the payroll experience because they allow the payroll manager to manage the entire process. This includes executing the payroll process, monitoring the process, creating notes and attachments, executing company policies, and distributing the identified issues and compliance violations to the payroll administrators or teams.

## Manage Processes – Process Configuration

| Name                                    | Process Type                     | Status |
|-----------------------------------------|----------------------------------|--------|
| Z20 HR812: 1 - Pre-Payroll (Monitoring) | Z20 1 Monitoring Payroll (Team)  | Active |
| Z20 HR812: 2 - Productive Payroll       | Z20 2 Production Payroll         | Active |
| Z20 HR812: 3 - Posting Payroll Results  | Z20 3 Productive Payroll Posting | Active |
| Z20 HR812: 4 - Bank Transfer            | Z20 4 Bank Transfer              | Active |

Figure 22: Managing Processes

The payroll process manager can add or delete a section in the process configuration. The payroll process manager can also add a new policy to the process, add or delete a team member, and change the dates of the recurrence of the process. In each of these cases, you should restart the process so that the changes can be reflected in the process outcome.

## Manage Policies – Policy Configuration

| Name                     | Policy Type                            | Status |
|--------------------------|----------------------------------------|--------|
| HR812 - Gross Pay Alerts | policies for gross and net pay ( USA ) | Active |
| HR812 - Net Pay Alerts   | policies for gross and net pay ( USA ) | Active |

Figure 23: Managing Policies

A payroll policy is a set of validation rules for employee master data and payroll data. If there is any violation of the policy, this will result in alerts, which will be resolved by the payroll administrators. A policy must have a relevant policy type that collects the relevant context, for example country grouping, instance selection parameter, and time selection parameter.

# Configure a Policy Group to Be Assigned to Payroll Processes

In Employee Central (EC), Emily Clark is now updating a simplified configuration using the New Policy screen. Emily, as process manager, creates a new policy in her organization to include new check rules for master data validation.

1. On the EC Home Page, open Payroll and add a new policy based on policies for personal information related ( USA ). Call it Z##\_HR812 - Master Data Alerts, where ## is your group number.
2. Emily adds the following validation rules which she wants to assign to this policy:  
Example - XX C008 - Employees missing main address ,  
Example - XX C009 - Employees missing main bank details, and  
Example - XX C010 - Employees locked for payroll. She validates her entries and saves them.

# Configure a Policy Group to Be Assigned to Payroll Processes

In Employee Central (EC), Emily Clark is now updating a simplified configuration using the New Policy screen. Emily, as process manager, creates a new policy in her organization to include new check rules for master data validation.

1. On the EC Home Page, open Payroll and add a new policy based on policies for personal information related ( USA ). Call it Z##\_HR812 - Master Data Alerts, where ## is your group number.
  - a) On the EC Home Page, choose *Payroll* from the *Home* dropdown list.
  - b) To add a policy, on the *Manage Policies* tab, choose the + sign, *Add Policy*, and select Z##\_ECP USA Policies Group ##.
  - c) In the *Policy Name* field, enter **Z##\_HR812 - Master Data Alerts**.
2. Emily adds the following validation rules which she wants to assign to this policy:  
Example - XX C008 - Employees missing main address ,  
Example - XX C009 - Employees missing main bank details, and  
Example - XX C010 - Employees locked for payroll. She validates her entries and saves them.
  - a) In the *Validation Rules* section, choose +.
  - b) From the validation rules list, select the following:  
Example - XX C008 - Employees missing main address,  
Example - XX C009 - Employees missing main bank details, and  
Example - XX C010 - Employees locked for payroll, and choose *Select*.
  - c) Choose *Validate*. No errors are found. Choose *Save*. The new policy is available.

### **LESSON SUMMARY**

You should now be able to:

- Configure a policy group to be assigned to payroll processes.

# Configuring One-Click Monitoring Payroll Processes in Payroll Control Center

## LESSON OBJECTIVES

After completing this lesson, you will be able to:

- Configure a one-click monitoring process to identify errors and alerts prior to production payroll.

## Identification of Errors and Alerts

### Using Validation Rules for the Identification of Errors and Alerts

During the policy configuration, validation rules are assigned to the policy configuration. These validation rules are executed by the system to identify compliance violations or potential risks. These rules validate employees' master data and payroll data during the payroll process. Solutions and root cause analysis for the generated alert are defined at the time of configuring the validation rules.

Note:

Creating or amending a validation rule is not part of this course.

For information about creating/amending the validation rule, please review the help guide [Implementing Employee Central Payroll in SAP library](#).

# Create and Assign a Required Payroll Group Policy for One-Click Monitoring

In Employee Central (EC), Emily Clark wants to update the existing Z## HR812: 1 Pre-Payroll (Monitoring) process to add the new policy: Z##\_HR812 – Master Data Alerts.

1. Open Payroll and start the *Manage Processes* tab to see the processes that are available and that can be adjusted.
2. On *Manage Processes*, edit *Z## HR812: 1 Pre-Payroll (Monitoring)*. The process details are available, structured with the following tabs:
  - Attributes
  - Selection
  - Policies (a set of validation rules)
  - Analytics (KPIs)
  - Recurrences (payroll period must be updated after the current one is closed)

Edit the following details, validate the result, and save your entries.

| Detail   | Action                                       |
|----------|----------------------------------------------|
| Policies | Add policy<br>Z##_HR812 - Master Data Alerts |

# Create and Assign a Required Payroll Group Policy for One-Click Monitoring

In Employee Central (EC), Emily Clark wants to update the existing Z## HR812: 1 Pre-Payroll (Monitoring) process to add the new policy: Z##\_HR812 – Master Data Alerts.

1. Open Payroll and start the *Manage Processes* tab to see the processes that are available and that can be adjusted.
  - a) On the EC Home Page, choose *Payroll* from the *Home* dropdown list.
  - b) Choose the *Manage Processes* tab to see the available processes.
2. On *Manage Processes*, edit *Z## HR812: 1 Pre-Payroll (Monitoring)*. The process details are available, structured with the following tabs:
  - Attributes
  - Selection
  - Policies (a set of validation rules)
  - Analytics (KPIs)
  - Recurrences (payroll period must be updated after the current one is closed)

Edit the following details, validate the result, and save your entries.

| Detail   | Action                                       |
|----------|----------------------------------------------|
| Policies | Add policy<br>Z##_HR812 - Master Data Alerts |

- a) Select *Z## HR812: 1 Pre-Payroll (Monitoring)*.
- b) Choose the *Edit* icon.
- c) On the *Policies* tab, choose the *Add Policies* icon.
- d) Select *Z##\_HR812 - Master Data Alerts*.
- e) Choose *Validate* to see if there are errors.
- f) Because there are no errors in our case, choose *Save*.

## LESSON SUMMARY

You should now be able to:

- Configure a one-click monitoring process to identify errors and alerts prior to production payroll.

# Configuring Teams for Payroll Processes in Payroll Control Center

## LESSON OBJECTIVES

After completing this lesson, you will be able to:

- Configure a team associated to the Payroll Control Center process.

## Configuration of Teams

### Manage Teams (Configuration of Teams)

Team configuration enables the payroll manager to set up teams for handling alerts. This process is only valid for the processes that are in the team monitoring category. The concept of teams allows the automatic distribution of alerts among teams based on predefined criteria and team collaboration between payroll process manager, team lead, and payroll administrators.

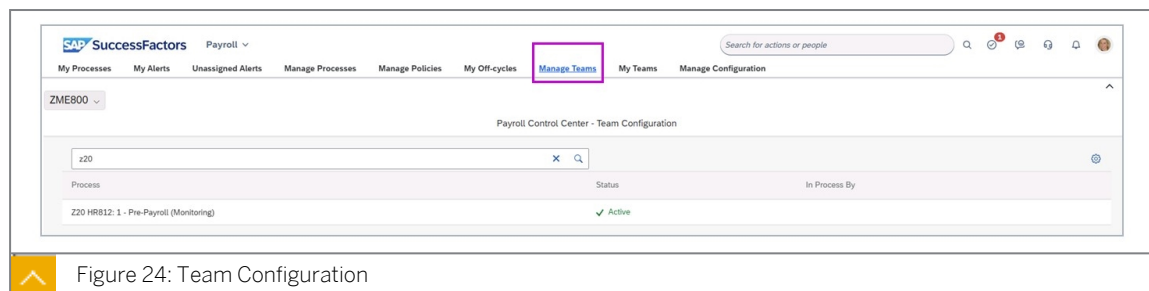

Figure 24: Team Configuration

With the team capabilities, alerts are automatically assigned to teams according to criteria. Teams are independent units and can only see their assigned alerts. The criteria can be chosen from policy information and organizational properties. The team is responsible for processing all the alerts that match the predefined criteria.

As part of the set-up, a team lead is mandatory. Team leads can activate and deactivate team members, assign alerts to team members, forward alerts to another team, and monitor the progress.

# Configure a Team Associated to the Payroll Control Center Process

In Employee Central (EC), Emily Clark is creating teams to be assigned to a payroll process using the *Manage Teams* UI.

1. In the *Manage Teams* UI, Emily Clark needs to create two different teams to be assigned to the process Z## HR812: 1 - Pre-Payroll (Monitoring). Note that on the home page of Team Management, only Payroll Control Center processes which are defined as the category Team Monitoring are displayed. To create new teams, Emily selects the process and edits it. She creates the first team and defines the following:
  - Team name: Team A
  - Team criteria: In this case, the process has been defined to have as team criteria only the following:
    - Payroll area: ECP Monthly Pay ##
    - Policy ID: Z##\_HR812 - Master Data Alerts

Payroll area and Policy ID: HR812 - Master Data Alerts and ECP Monthly Pay ##

  - Team leads: Adam Wan ##
  - Team members: Linda Lewis ##
2. On the *Edit Team Setup* screen, Emily chooses *Check Team Setup* to discover which team criteria are not yet assigned to the team. She selects all remaining options, in this case two different policies, and assigns the team criteria to the team. In the following popup, she chooses *Assign to a new Team*. Then, she has to define the name of the new team, which is Team B, and chooses *Assign to New Team*. Now the new Team B is created. For Team B, only team lead Linda Lewis## and team member Adam Wan## are maintained.
3. For the two new teams, Emily validates the new configuration with *Check Team Setup*. With a successful team setup, Emily activates the new team configuration. The team setup for process HR812: 1 - Pre-Payroll (Monitoring) is completed.

# Configure a Team Associated to the Payroll Control Center Process

In Employee Central (EC), Emily Clark is creating teams to be assigned to a payroll process using the *Manage Teams* UI.

1. In the *Manage Teams* UI, Emily Clark needs to create two different teams to be assigned to the process Z## HR812: 1 - Pre-Payroll (Monitoring). Note that on the home page of Team Management, only Payroll Control Center processes which are defined as the category Team Monitoring are displayed. To create new teams, Emily selects the process and edits it. She creates the first team and defines the following:

- Team name: Team A
- Team criteria: In this case, the process has been defined to have as team criteria only the following:
  - Payroll area: ECP Monthly Pay ##
  - Policy ID: Z##\_HR812 - Master Data Alerts

Payroll area and Policy ID: HR812 - Master Data Alerts and ECP Monthly Pay ##

- Team leads: Adam Wan ##
  - Team members: Linda Lewis ##
- a) On the EC Home Page, choose Payroll from the *Home* dropdown list and select the *Manage Teams* tab. Use the search bar to locate your group processes by searching **z##**. Process Z## HR812: 1 Pre-Payroll (Monitoring) is displayed.
  - b) Select this process, then choose *Edit*, and choose *Add New Team*. Enter the following data:

| Field name                                          | Entry                                                                                             |
|-----------------------------------------------------|---------------------------------------------------------------------------------------------------|
| Attributes → Teams                                  | Team A                                                                                            |
| Team Criteria → choose + to add a Policy ID.        | Search Z##. Select<br>Select Z##_HR812 - Master Data Alerts.                                      |
| Team Criteria → Choose + to add a Payroll Area.     | Select ECP Monthly Pay ##.                                                                        |
| Team Leads → Choose + to add and search for a user. | In the search, enter <b>Adam</b> to reduce the number of results. Select Adam Wan ## (ECP-TM-##). |

| Field name                                            | Entry                                                                                                 |
|-------------------------------------------------------|-------------------------------------------------------------------------------------------------------|
| Team Members → Choose + to add and search for a user. | In the search, enter <b>Linda</b> to reduce the number of results. Select Linda Lewis ## (ECP-TL-##). |

The first team is created.

- c) Return to the previous screen, Edit Team Setup by choosing *Back*.
2. On the *Edit Team Setup* screen, Emily chooses *Check Team Setup* to discover which team criteria are not yet assigned to the team. She selects all remaining options, in this case two different policies, and assigns the team criteria to the team. In the following popup, she chooses *Assign to a new Team*. Then, she has to define the name of the new team, which is Team B, and chooses *Assign to New Team*. Now the new Team B is created. For Team B, only team lead Linda Lewis## and team member Adam Wan## are maintained.
  - a) To discover which team criteria are not yet assigned to the new Team A, choose *Check Team Setup*. Note that the new team is not yet active.
  - b) Select all open options that are listed.
  - c) To create the new Team B, first choose *Assign Team Criteria to Team*.
  - d) Assign to New Team and as a team name, enter **Team B** and choose *Assign to New Team* again. This is a way to create a new team!
  - e) Return to the previous screen Edit Team Setup by choosing *Back*. Team A and Team B are listed now.
  - f) Select Team B from the list and enter the following data:

| Field name                                            | Entry                                                                                                 |
|-------------------------------------------------------|-------------------------------------------------------------------------------------------------------|
| Attributes → Teams                                    | No entry required; name has been given already.                                                       |
| Team Criteria → choose + to add a Policy ID.          | No entry required                                                                                     |
| Team Leads → Choose + to add and search for a user.   | In the search, enter <b>Linda</b> to reduce the number of results. Select Linda Lewis ## (ECP-TL-##). |
| Team Members → Choose + to add and search for a user. | In the search, enter <b>Adam</b> to reduce the number of results. Select Adam Wan ## (ECP-TM-##).     |

The second team is created.

- g) Return to the Edit Team Setup screen by choosing *Back*.
3. For the two new teams, Emily validates the new configuration with *Check Team Setup*. With a successful team setup, Emily activates the new team configuration. The team setup for process HR812: 1 - Pre-Payroll (Monitoring) is completed.

- a) On the Edit Team Setup screen, to validate the new configuration, choose *Check Team Setup*. Note that the team setup is correct.
- b) For activating the new configuration, choose *Activate* and confirm by choosing *Activate* again.
- c) Return to the Team Setup screen by choosing *Back*, and note that the HR812: 1 - Pre-Payroll (Monitoring) process is active.
- d) Return to the *Payroll Control Center - Team Configuration* by choosing *Back*. Process HR812: 1 - Pre-Payroll (Monitoring) is active. This step concludes this exercise.

### **LESSON SUMMARY**

You should now be able to:

- Configure a team associated to the Payroll Control Center process.

## Running One-click Monitoring Payroll Processes

### LESSON OBJECTIVES

After completing this lesson, you will be able to:

- Run a one-click monitoring process to resolve any alerts or technical errors.

### One-Click Monitoring Process

#### One-Click Monitoring

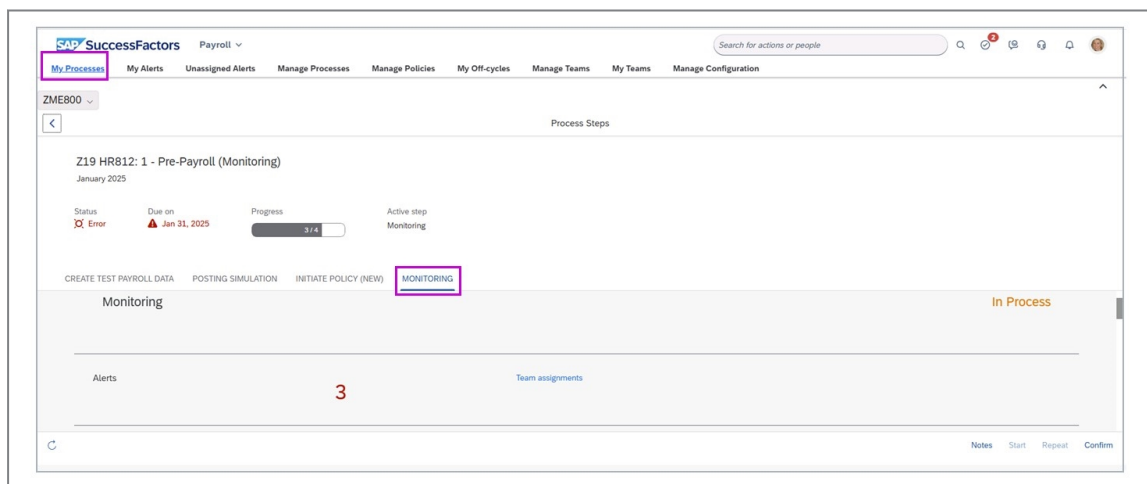

Figure 25: Pre-Payroll Monitoring

Monitoring processes are executed before the production payroll run so that you can detect issues with master data and payroll processing as early as possible. This way, a production payroll can be run later with fewer issues.

There are two types of monitoring processes, monitoring process and team monitoring process. The only difference is team monitoring assigns the alerts to a team based on the predefined criteria whereas in the simple monitoring process, alerts need to be manually assigned by a payroll manager.

The payroll process manager monitors the resolution of the alerts by teams in Process Management. And the team lead monitors the resolution of the alerts by individual payroll administrators in Team Management.

Typical process steps involved in this process are the following:

- Executing test payroll run
- Executing test run for posting to finance

- Executing policies and compliance checks (raising alerts)
- Assigning alerts and monitoring the resolution of alerts
- Review of drill down KPIs

Note:

This monitoring process can be executed as many times as required. You do not have to wait until all the steps are completed to restart the process, thus allowing a great deal of flexibility to the payroll process managers.

Note:

**Notable Enhancement** - As of 1H 2023, there is a *Step* category in the object type *Action* which allows you to define the links to be displayed in steps. These *Step links* will be visible in the *Action* section of the step tab in *My Processes* when the step is **In Process**. This enables companies to provide additional information about a step based on business needs.

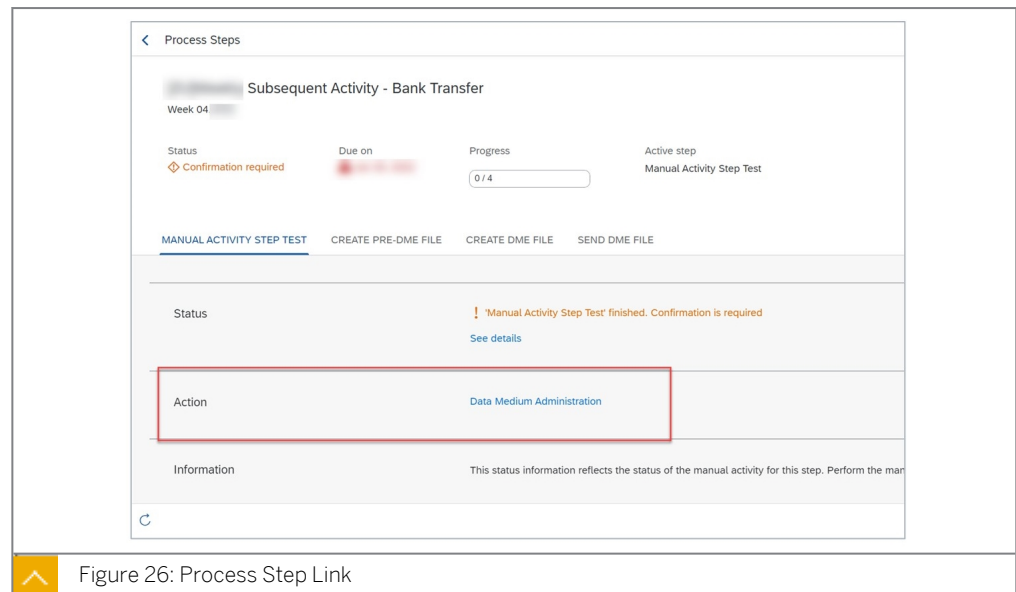

Figure 26: Process Step Link

# Run a One-Click Monitoring Process to Resolve Alerts or Technical Errors

Emily Clark, in her role as payroll process manager, wants to perform the pre-payroll (monitoring) process to identify alerts or technical errors. She assigns alerts to teams, who then solve the alerts. Solving alerts is not part of this exercise. This is done in another step.

1. To start the pre-payroll monitoring process on the Employee Central (EC) Home Page, from the *Home* dropdown list, she selects Payroll and then My Processes. Then, she opens the folder *Upcoming processes*, and here, she can see all processes for January of the current year. She decides to start the process Z## HR812: 1 Pre-Payroll (Monitoring).
2. On *Active Processes*, note that you start the first out of 4 process steps, *Create Test Payroll data*, automatically when you select the Z## HR812: 1 Pre-Payroll (Monitoring) process. Now all 4 steps, which are included in the whole process, are displayed. When a step is performed, background jobs are created, and when the step is completed, you can display the spool of the corresponding jobs. For the first step, *Create Test Payroll data*, you can now display the payroll log by choosing *See details*.
3. When the first step is finished successfully, the second step *Posting Simulation* is automatically started. For this step, a new job is created in the back-end system. You can display the log of each job created.
4. After successfully finishing the second step *Posting Simulation*, the third step *Initiate Policy (New)* is automatically executed. Here, all validation rules included in the policy of this process are evaluated.
5. After the step *Initiate Policy (New)* is completed, the last step *Monitoring* can be executed by choosing *Start*. Three alerts are generated, and you assign them to the right team according to the criteria defined in Manage Team functionality. On this page, besides the Alert section, other applicable sections are displayed, for example, the KPI sections. All this information provides Emily with complete visibility into the payroll process. For instance, she can determine the number of new hires during a specific period. Finally, she can see the type of alerts generated by clicking on each team.

# Run a One-Click Monitoring Process to Resolve Alerts or Technical Errors

Emily Clark, in her role as payroll process manager, wants to perform the pre-payroll (monitoring) process to identify alerts or technical errors. She assigns alerts to teams, who then solve the alerts. Solving alerts is not part of this exercise. This is done in another step.

1. To start the pre-payroll monitoring process on the Employee Central (EC) Home Page, from the *Home* dropdown list, she selects *Payroll* and then *My Processes*. Then, she opens the folder *Upcoming processes*, and here, she can see all processes for January of the current year. She decides to start the process *Z## HR812: 1 Pre-Payroll (Monitoring)*.
  - a) On the EC Home Page, choose *Payroll* from the *Home* dropdown list and select the *My Processes* tab.
  - b) Choose *Upcoming Processes*.
  - c) Start process *Z## HR812: 1 Pre-Payroll (Monitoring)* by choosing *Start Process*. This process disappears from the list of upcoming processes. It is now displayed on the *Active Processes* tab.
2. On *Active Processes*, note that you start the first out of 4 process steps, *Create Test Payroll data*, automatically when you select the *Z## HR812: 1 Pre-Payroll (Monitoring)* process. Now all 4 steps, which are included in the whole process, are displayed. When a step is performed, background jobs are created, and when the step is completed, you can display the spool of the corresponding jobs. For the first step, *Create Test Payroll data*, you can now display the payroll log by choosing *See details*.
  - a) Choose *Active Processes*. The first step of the process is automatically started.
  - b) Choose the *Z## HR812: 1 Pre-Payroll (Monitoring)* process. This opens a view with tabs for all four processes:
    - Create test payroll data
    - Posting simulation
    - Initiate policy (new)
    - Monitoring

**Note:**

When a step is performed, background jobs are created, and when the step is completed, you can display the spool of the corresponding jobs. For example, for the first step, you can see the payroll log by choosing *See details*.

- c) For step *Create test payroll data*, choose the *Refresh* icon. Step *Create Test Payroll Data* has been finished successfully.
  - d) Choose *See details*.
  - e) As there are no entries on the *Messages* tab, choose *Program details*.
  - f) Choose *00001/Simulation Payroll Run*. The log file for this simulation payroll run is displayed.
  - g) Choose *Back* to return to the Process Steps overview.
3. When the first step is finished successfully, the second step *Posting Simulation* is automatically started. For this step, a new job is created in the back-end system. You can display the log of each job created.
  - a) Choose the *Refresh* icon. The *Posting Simulation* step has been finished successfully.
  - b) Choose *See details*.
  - c) As there are no entries on the *Messages* tab, choose *Program details*.
  - d) Choose *Simulate Posting*. First, the log file for this simulation payroll run is displayed.
  - e) Choose *Back*, and the *Simulate Posting* log is displayed.
  - f) Choose *Back*, and on the *Posting Simulation* screen, choose *Display Posting Document*.
  - g) The *Display Posting Document* log is displayed.
  - h) Choose *Back* twice to return to the Process Steps overview.
4. After successfully finishing the second step *Posting Simulation*, the third step *Initiate Policy (New)* is automatically executed. Here, all validation rules included in the policy of this process are evaluated.
  - a) Choose the *Refresh* icon. Step *Initiate Policy (New)* has been finished successfully.
  - b) Choose *See details*.
  - c) As there are no entries on the *Messages* tab, choose *Program details*. All validation rules are displayed, and they are finished.
  - d) Choose *Back* and return to the *Z## HR812: 1 Pre-Payroll (Monitoring)* screen.
5. After the step *Initiate Policy (New)* is completed, the last step *Monitoring* can be executed by choosing *Start*. Three alerts are generated, and you assign them to the right team according to the criteria defined in *Manage Team* functionality. On this page, besides the *Alert* section, other applicable sections are displayed, for example, the *KPI* sections. All this information provides Emily with complete visibility into the payroll process. For instance, she can determine the number of new hires during a specific period. Finally, she can see the type of alerts generated by clicking on each team.
  - a) Choose the *Refresh* icon. This enables the *Start* button.
  - b) Choose *Start*. The number of alerts is displayed, in this case, three.
  - c) Choose *Team assignments*. Affected teams and the number of related alerts are displayed. A team with two and another team with three alerts are affected.
  - d) To assign the alerts to the teams, choose *Start All* and confirm with *OK*.

- e) Choose *Back* to return to the *Z## HR812: 1 Pre-Payroll (Monitoring)* screen. Team A has been assigned to two alerts, while Team B has been assigned to one alert.

Note:

Besides the alerts, you see now other information, such as the Employee Count Analysis, Payroll Analysis, or *Tax Amount Analysis*.

Note:

If the system does not display progress at this stage of the exercise, you may need to refresh your browser window.

- f) In the Alerts section, choose *Team A*. You see details about the alert, in this case Example - XX - C008 - Employees missing main address, and the number of affected team members, in this case 2.
- g) Choose *Back*, and in *Team assignments*, choose *Team B*. Again, the alert for Team B is shown.
- h) Choose *Back* to return to the Process Steps screen for *Z## HR812: 1 Pre-Payroll (Monitoring)*.

Caution:

Step h. concludes this exercise. Do not try out other possible options to proceed with the alerts. The alerts are not yet solved. This will happen in another exercise.

### **LESSON SUMMARY**

You should now be able to:

- Run a one-click monitoring process to resolve any alerts or technical errors.

## Running Production Payroll Processes

### LESSON OBJECTIVES

After completing this lesson, you will be able to:

- Describe the production payroll process to create payroll results.

### Production Payroll Process

#### Production Payroll Process

Production processes are executed after the monitoring or team monitoring payroll process. The monitoring or team monitoring payroll has been run to detect issues with master data and payroll processing as early as possible so that a production payroll can be run with fewer issues.

The production payroll steps are the following:

- Open payroll (release payroll control record for payroll)
- Run payroll
- Simulate posting
- Do compliance checks and validations
- Assign alerts for resolution

After completing a production payroll process, the Remuneration Statement becomes available to employees for viewing.

Note:

In a production payroll, alerts are not assigned automatically to the team. Payroll process managers should assign the alerts manually.

Note:

There is an exercise for running a production payroll. This exercise is part of another unit because it will only work after all alerts are resolved.

### LESSON SUMMARY

You should now be able to:

- Describe the production payroll process to create payroll results.

## Unit 4

### Lesson 6

# Resolving Alerts Generated from the Payroll Process

## LESSON OBJECTIVES

After completing this lesson, you will be able to:

- Resolve alerts that are generated from the payroll process.

## Alerts

During the execution of the payroll process, validation rules are executed, and identified issues and compliance violations are distributed to the responsible payroll administrators or teams (in the case of Team Monitoring processes) for correction. A payroll administrator uses Alert Management to manage all the alerts that are assigned to them, pick up any unassigned alerts for processes that they are a member of, and forward an assigned alert to another payroll administrator.

| Process                                                           | Status | Due On       | Alerts | Not Assigned Alerts | Resolved Alerts | Top Validation Rules                                                                    |
|-------------------------------------------------------------------|--------|--------------|--------|---------------------|-----------------|-----------------------------------------------------------------------------------------|
| Z19 HRB12: 1 - Pre-Payroll (Monitoring)<br>January 2025<br>Team A | Active | Jan 31, 2025 | 2      | 0                   | 0               | - SBP - XX - C008 - Employees missing main address<br>*** 2                             |
| Z19 HRB12: 1 - Pre-Payroll (Monitoring)<br>January 2025<br>Team B | Active | Jan 31, 2025 | 1      | 0                   | 0               | - SBP - US - C026 - Employees with Gross pay over threshold amount (10,000 \$)<br>*** 1 |

Figure 27: Alerts Management

### Note:

Alerts are assigned automatically to teams based on the predefined team criteria. Alerts that don't meet the criteria of any team are unassigned or assigned automatically to a default team.

## Alert Resolution

### Alert Resolution by Payroll Administrators

Alerts should be resolved by the respective payroll administrators. In some cases, the alerts might just require that the deviation to the policy is acknowledged, but in other cases, they may need to be investigated and resolved.

Payroll administrators can navigate to *My Alerts*, which has a feature to propose the solution for master data and payroll data. Admins can navigate to people profile to correct the master

data. It also enables admins to read the relevant help documents if the link has been configured in the back end.

Payroll administrators and payroll process managers can drill down to the root cause of an alert displayed on the *Alert Details* page in Alert Management, Team Management, and the Monitoring step in Process Management. The root cause analysis provides error detail for an alert and helps payroll administrators to analyze the detailed data for resolving this alert.

After payroll administrators update employees' master data in Employee Central, they can recheck or validate an alert after the master data is replicated from the Employee Central system to the Employee Central Payroll system.

Note:

**Notable Enhancement** - As of 1H 2023, the new improvements in the *My Alerts* application provide additional columns and information highlighted for resolved alerts, making it easier for payroll administrators to manage and process alerts more efficiently. Additionally, this aims to prevent potential policy violations caused by resolved alerts that do not get re-evaluated and re-alarmed when an employee's net pay changes significantly by mistake. This new improvement will help to ensure the alerts are reviewed and flagged, even if the alerts were previously marked as resolved, thereby enhancing the compliance and monitoring process.

| Process                                                 | Status | Due On       | Not Assigned Alerts | Resolved Alerts |

Figure 29: Details and Key Indicators Shown for Resolved Alerts

# Assign an Alert to a Payroll Administrator

Adam Wan ## (ECP-TM-##), as team lead for Team A, and Linda Lewis ## (ECP-TL-##), as team lead for Team B, would like to verify the unassigned alerts that were generated after the first execution of the pre-payroll process.

1. Make sure to log on as Adam Wan## (ECP-TM-##) to Employee Central (EC). From the *Home* dropdown menu, select *Payroll*, and select *My Teams*. Adam displays the alerts related to the process Z## HR812: 1 Pre-Payroll (Monitoring) which are assigned to Team A.
2. Make sure to log on as Linda Lewis (ECP-TL-##) to EC. From the *Home* dropdown menu, select *Payroll*, and select *My Teams*. Linda displays the alert related to the process Z## HR812: 1 Pre-Payroll (Monitoring), which is assigned to Team B.

# Assign an Alert to a Payroll Administrator

Adam Wan ## (ECP-TM-##), as team lead for Team A, and Linda Lewis ## (ECP-TL-##), as team lead for Team B, would like to verify the unassigned alerts that were generated after the first execution of the pre-payroll process.

1. Make sure to log on as Adam Wan## (ECP-TM-##) to Employee Central (EC). From the *Home* dropdown menu, select *Payroll*, and select *My Teams*. Adam displays the alerts related to the process Z## HR812: 1 Pre-Payroll (Monitoring) which are assigned to Team A.

- a) On the EC Home Page, log on as Adam Wan ## (ECP-TM-##).

Enter the following:

|          |            |
|----------|------------|
| EC User  | ECP-TM-##  |
| Password | Password01 |

- b) From the *Home* dropdown list, choose *Payroll*, and select the *My Teams* tab.
  - c) Choose the tile for *Team A* with two open alerts. All alerts are now displayed in more detail.
  - d) Click on the red bar for the first alert,  
Example - XX - C008 Employees missing main address.
  - e) Select *Phil Rosee ##* and *Mark Brown ##*.
  - f) Choose the *Assign processor* icon. Select Linda Lewis (ECP-TL-##) as processor.
  - g) Choose *Back* to return to the screen for Team A.
  - h) Check the *Not assigned* tab. There are no unassigned alerts.
  - i) Check the *Processor* tab. Linda Lewis is now the processor. By clicking on the red bar, you can see that both alerts about *Employees missing main address* are assigned to Linda Lewis.
  - j) Now log out as user Adam Wan ## (ECP-TM-##).
2. Make sure to log on as Linda Lewis (ECP-TL-##) to EC. From the *Home* dropdown menu, select *Payroll*, and select *My Teams*. Linda displays the alert related to the process Z## HR812: 1 Pre-Payroll (Monitoring), which is assigned to Team B.
- a) On the EC home page, log on as Linda Lewis ##.

Enter the following:

|          |            |
|----------|------------|
| EC User  | ECP-TL-##  |
| Password | Password01 |

- b)** From the *Home* dropdown list, choose *Payroll*, and select the *My Teams* tab.
- c)** Choose the tile for *Team B* with one open alert. Now, the alert is displayed in more detail.
- d)** Click on the red bar for alert  
SBP - US - C026 - Employees with Gross pay over threshold amount ( 10,000 \$ ).
- e)** Select *Mark Brown ##*.
- f)** Choose the *Assign processor* icon. Select *Adam Wan ##* (ECP-TM-##) as processor.
- g)** Choose *Back* to return to the screen for *Team B*.
- h)** Switch to the *My Alerts* tab. Stay on the *My Worklist With Alerts* tab.
- i)** Select the *Z## HR812: 1 Pre-Payroll (Monitoring)* process. The unresolved alert with *Key Indicator Main Address Missing* for *Phil Rosee ##* and *Mark Brown ##* is displayed.
- j)** Now log out as user *Linda Lewis ##* (ECP-TL-##).

## Resolve an Alert and Verify the Results

Adam Wan ##, as a member of Team B, wants to verify the assigned alerts that have been generated after the first execution of the Pre-Payroll process.

1. Make sure to log on as Adam Wan ## (ECP-TM-##) to Employee Central (EC). Adam, as Payroll Member of Team B, wants to verify alerts assigned to him. From the *Home* dropdown menu, select *Payroll*, and select *My Alerts*. On the *My worklist with alerts* tab, he can display the one alert that is assigned to him.
2. Navigate to the *Solutions* tab, where you can display all the preconfigured solutions for this alert. Take the first one, *Check compensation details in the employee profile*, as it seems that the error is related to a wrong value in the compensation section. Open that link and directly open the employee profile of Mark Brown ##. In the *Compensation* section, modify the wrong amount of the bonus pay component. The new value is USD 110. Save the latest information. After that, you need to log out as Adam Wan ## (ECP-TM-##).
3. Make sure to log on as Linda Lewis ## (ECP-TL-##) to EC. Linda, as Payroll Member of Team A, wants to verify alerts assigned to her. From the *Home* dropdown menu, select *Payroll*, and select *My Alerts*. In the sheet, *My Worklist with Alerts*, she can display the two alerts that are assigned to her.

## Resolve an Alert and Verify the Results

Adam Wan ##, as a member of Team B, wants to verify the assigned alerts that have been generated after the first execution of the Pre-Payroll process.

1. Make sure to log on as Adam Wan ## (ECP-TM-##) to Employee Central (EC). Adam, as Payroll Member of Team B, wants to verify alerts assigned to him. From the *Home* dropdown menu, select *Payroll*, and select *My Alerts*. On the *My worklist with alerts* tab, he can display the one alert that is assigned to him.

- a) On the EC Home Page, log on as Adam Wan ##.

Enter the following:

|          |                                                                                                                                                   |
|----------|---------------------------------------------------------------------------------------------------------------------------------------------------|
| EC User  | ECP-TM-##                                                                                                                                         |
| Password | Password01 (If, when performing the previous exercise, the system asked you to change the initial password, now you need to enter a new password) |

- b) From the *Home* dropdown menu, select *Payroll*, and select *My Alerts*.
  - c) On the *My Worklist With Alerts* tab, one alert is listed for the Z## HR812: 1 - Pre-Payroll (Monitoring) process.
  - d) Select the following alert: Example - US - C026 - Employees with Gross pay over threshold amount (10,000 \$).
  - e) Click on the line for Mark Brown ##.
  - f) On the details tab, scroll down to the details for Payslip on Test Payroll Results. In the payslip, you will find that the bonus is USD 11,000. Why? A new wage type 1053 - Bonus had been assigned wrongly to that employee.
2. Navigate to the *Solutions* tab, where you can display all the preconfigured solutions for this alert. Take the first one, *Check compensation details in the employee profile*, as it seems that the error is related to a wrong value in the compensation section. Open that link and directly open the employee profile of Mark Brown ##. In the *Compensation* section, modify the wrong amount of the bonus pay component. The new value is USD 110. Save the latest information. After that, you need to log out as Adam Wan ## (ECP-TM-##).
- a) Choose the *Solutions* tab.
  - b) Select *Check compensation details in employee profile*.

**Note:**

This step opens another browser window, the SAP SuccessFactors: People Profile.

- c) On this new tab, choose the *Compensation* section and choose the *Spot bonus* tile.
  - d) Choose the *Edit Spot Bonus* icon (pencil) and edit the *Value*. In the *Value* field, enter **110** and choose *Save*.
  - e) Close the SAP SuccessFactors: People Profile tab.
  - f) Switch to the *Alert Details* tab.
  - g) To validate this step, choose *Refresh*. Note that the *Status* for the alert changed from *Unresolved* to *Completed*.
  - h) Choose *Back* to return to the following screen: Example - US - C026 - Employees with Gross pay over threshold amount ( 10,000 \$ )
  - i) On the *Unresolved* tab, the alert for Mark Brown ## has disappeared.
  - j) Switch to the *Completed* tab. Here, the entry for Mark Brown ## has no further details.
  - k) Log out as Adam Wan (ECP-TM-##).
3. Make sure to log on as Linda Lewis ## (ECP-TL-##) to EC. Linda, as Payroll Member of Team A, wants to verify alerts assigned to her. From the *Home* dropdown menu, select *Payroll*, and select *My Alerts*. In the sheet, My Worklist with Alerts, she can display the two alerts that are assigned to her.
- a) On the EC Home Page, log on as Linda Lewis (ECP-TL-##).  
Enter the following:

|          |                                                                                                                                                   |
|----------|---------------------------------------------------------------------------------------------------------------------------------------------------|
| EC User  | ECP-TL-##                                                                                                                                         |
| Password | Password01 (If, when performing the previous exercise, the system asked you to change the initial password, now you need to enter a new password) |

- b) From the *Home* dropdown menu, select *Payroll*, and select *My Alerts*.
- c) On the *My Worklist With Alerts* tab, two alerts are listed for the Z## HR812: 1 - Pre-Payroll (Monitoring) process.
- d) Select the following alert: Example - XX - C008 - Employees missing main address. This opens the details for this alert. You are now on the *Unresolved* tab.
- e) Select the alert for Phil Rosee ECP-EE-##. On the *Solutions* tab, you can display all the preconfigured solutions for this alert.
- f) Select the *Addresses info in the Employee Profile* link. This directly opens another browser window, the employee profile of Phil Rosee ECP-EE-##.

- g) In the Employee Profile, choose the *Personal Data* section, select *Addresses* tile, because it seems that the error is related to the lack of address information of the employee.
- h) In the *Addresses* tile, to enter the address, choose the *Add* button.
- i) Enter the January 1st of the current year in the field *When should these changes take effect?*
- j) Choose the "Add Address" button in the lower left corner of the *Addresses* window
- k) Enter all information from the following table. Then, save the new information.

| Phil Rosee##                                                                          |                                                                                                                         |
|---------------------------------------------------------------------------------------|-------------------------------------------------------------------------------------------------------------------------|
| When would you like your changes to take effect?                                      | Choose <b>01/01/xxxx</b> where XXXX is the current year in the calendar picker. Choose the <i>Add addresses</i> button. |
| Click the <i>Add Addresses</i> button located in the lower-left corner of the screen. |                                                                                                                         |
| Address Type                                                                          | Permanent Residence                                                                                                     |
| Country                                                                               | United States (offered by default)                                                                                      |
| Address 1                                                                             | 203 C Pier 39                                                                                                           |
| City                                                                                  | San Francisco                                                                                                           |
| State                                                                                 | California                                                                                                              |
| ZIP                                                                                   | 94133                                                                                                                   |

- l) Close the People Profile of Phil Rosee ##.
- m) Back on the Example - XX - C008 - Employees missing main address details, on the *Unresolved* tab, select the alert for Mark Brown ECP-EMP-##.
- n) From the suggested solutions for this alert, choose the first one, *Address info in Employee Profile* again. Open that link, and you will be directly redirected to another browser window, displaying the employee profile of Mark Brown (ECP-EMP-##). In the *Addresses* tile, enter the address according to the table, and then save the updated resolve and verify information.

| Mark Brown##                                     |                                                                                                                           |
|--------------------------------------------------|---------------------------------------------------------------------------------------------------------------------------|
| When would you like your changes to take effect? | Choose <b>01/01/xxxx</b> , where XXXX is the current year in the calendar picker. Choose the <i>Add addresses</i> button. |
| Address Type                                     | Permanent Residence                                                                                                       |
| Country                                          | United States (offered by default)                                                                                        |
| Address 1                                        | 6925 Hollywood Blvd                                                                                                       |

|                     |             |
|---------------------|-------------|
| <b>Mark Brown##</b> |             |
| City                | Los Angeles |
| State               | California  |
| ZIP                 | 90028       |

- o) Close the window with Employee Profile of Mark Brown ##.
- p) Back on the *Unresolved* tab, to validate this step, select the first alert and choose *Validate*. The system message confirms that the validation was completed without any alerts. Repeat the validation for the second alert. Now the *Unresolved* tab shows 0 alerts, and the *Completed* tab shows two alerts. Note that validation may take time!

**Note:**

If the entry area is already cleared, as of EA-HRXX SP028, the Payroll Control Center is enhanced with the Event Handler function. The Event Handler automatically identifies relevant master data changes in transaction PA30 and initiates a shadow process only for employees with changes, validating these changes against defined policies without requiring user intervention.

- q) Switch to the *Completed* tab. Here, the entries for Phil Rosee and Mark Brown have no further details.
- r) Choose *Back* to return to the *My Worklist With Alerts* tab. For Team B, the number of alerts is now 0 instead of 2 for the Z## HR812: 1 - Pre-Payroll (Monitoring) process.

**Note:**

The information is automatically replicated in the Employee Central Payroll system thanks to a scheduled replication job.

- s) Log out as Linda Lewis (ECP-TL-##).

## Run a Production Payroll Process

Emily Clark in her role as payroll process manager wants to run a production payroll process.

1. When all alerts are resolved, the payroll administrator closes the process for this payroll period by choosing *Confirm*. After inserting a comment in the following popup window, the process is automatically moved to the *Completed Processes* folder.
2. On *Manage Processes*, edit *Z## HR812: 2 Production Payroll*. The process details are available, structured with the following tabs:
  - Attributes
  - Selection
  - Policies (a set of validation rules)
  - Analytics (KPIs)
  - Recurrences (payroll period must be updated after the current one is closed)

Edit the following details, validate the result, and save your entries.

| Detail      | Action                                       |
|-------------|----------------------------------------------|
| Policies    | Add policy<br>Z##_HR812 - Master Data Alerts |
| Predecessor | Z## HR812: 1 Pre-Payroll (Monitoring)        |

3. To start the Production Payroll process, from the *My Processes* tab, switch to the *Upcoming processes*. Here, you can see all processes for January of the current year. Start process *Z## HR812: 2 - Production Payroll*.
4. On the *Active Processes* tab, note that you start the first out of six process steps, *Start Process*, automatically when you select the *Z## HR812: 2 - Production Payroll* process. All six steps which are included in the whole process are displayed. When a step is performed, background jobs are created and when the step is completed, you can display the spool of the corresponding jobs. You also complete the steps, *Run Payroll* and *Posting Simulation*.
5. To check if there are issues related to the posting before you close the payroll period, initiate a policy to execute all checks that are included in the policy that is assigned to this process. In *Monitoring*, you display the results of executing the policy.
6. Now you end the *Payroll* process.
7. Check if the *Z## HR812: 2 - Production Payroll* process is listed in *Completed Processes*.

## Run a Production Payroll Process

Emily Clark in her role as payroll process manager wants to run a production payroll process.

1. When all alerts are resolved, the payroll administrator closes the process for this payroll period by choosing *Confirm*. After inserting a comment in the following popup window, the process is automatically moved to the *Completed Processes* folder.
  - a) On the Employee Central Home Page, from the *Home* dropdown list, choose *Payroll*.
  - b) Choose *My processes* and then the *Active Processes* tab.
  - c) Choose the *Z## HR812: 1 Pre-Payroll (Monitoring)* process and choose *Confirm*.
  - d) Enter a comment, such as **Confirmed**, and choose *OK*.

Note:

Because the Monitoring Process is completed successfully, the status has now changed to *Completed*.

- e) To check completion, choose *Back*. With this, you return to the *My Processes* screen.
  - f) Choose the *Completed Processes* tab. Process *Z## HR812: 1 Pre-Payroll (Monitoring)* is listed without alerts. This is the expected result!
2. On *Manage Processes*, edit *Z## HR812: 2 Production Payroll*. The process details are available, structured with the following tabs:
  - Attributes
  - Selection
  - Policies (a set of validation rules)
  - Analytics (KPIs)
  - Recurrences (payroll period must be updated after the current one is closed)

Edit the following details, validate the result, and save your entries.

| Detail      | Action                                       |
|-------------|----------------------------------------------|
| Policies    | Add policy<br>Z##_HR812 - Master Data Alerts |
| Predecessor | Z## HR812: 1 Pre-Payroll (Monitoring)        |

- a) Select *Z## HR812: 2 Production Payroll*.
  - b) Choose the *Edit* icon.
  - c) On the *Policies* tab, choose the *Add Policies* icon.
  - d) Select *Z##\_HR812 - Master Data Alerts*.
  - e) On the *Predecessor* tab, choose the *Add Monitoring Processes* icon.
  - f) Select *Z## HR812: 1 Pre-Payroll (Monitoring)*.
  - g) Choose *Validate* to see if there are errors.
  - h) Because there are no errors in our case, choose *Save*.
3. To start the Production Payroll process, from the *My Processes* tab, switch to the *Upcoming processes*. Here, you can see all processes for January of the current year. Start process *Z## HR812: 2 - Production Payroll*.
    - a) On the EC Home Page, choose *Payroll* from the *Home* dropdown list and select the *My Processes* tab.
    - b) Choose *Upcoming Processes*.
    - c) Start process *Z## HR812: 2 - Production Payroll* by choosing *Start Process*. Now, this process disappears from the list of upcoming processes. Instead, it is displayed on the *Active Processes* tab.
  4. On the *Active Processes* tab, note that you start the first out of six process steps, *Start Process*, automatically when you select the *Z## HR812: 2 - Production Payroll* process. All six steps which are included in the whole process are displayed. When a step is performed, background jobs are created and when the step is completed, you can display the spool of the corresponding jobs. You also complete the steps, *Run Payroll* and *Posting Simulation*.
    - a) Choose *Active Processes* and select *Z## HR812: 2 - Production Payroll*. This starts the process automatically. In case of no errors, the Status changes to *Start Payroll finished successfully*. Note that the process is still displayed as *In Process*.

Note:

In addition you can see tabs for all six processes:

- Start Payroll
- Run Payroll
- Posting simulation
- Initiate policy
- Monitoring
- End Payroll

**Note:**

With starting the Production Payroll process, employee master data maintenance will be locked for all employees who are assigned to this process.

- b) Choose the *Refresh* icon to set this step to Completed.
- c) Choose the *Run Payroll* tab for the Z## HR812: 2 - Production Payroll process. The process runs automatically. In case of no errors, the Status changes to Run Payroll finished successfully. Note that the process is still displayed as In Process.
- d) Choose the *Refresh* icon to set this step to Completed.
- e) Choose the *Posting Simulation* tab. In case of no errors, the Status changes to Posting Simulation finished successfully. Note that the process is still displayed as In Process.

**Note:**

With this step, you write the results in the payroll cluster simulate posting document.

- f) Choose the *Refresh* icon to check if this step is Completed.
5. To check if there are issues related to the posting before you close the payroll period, initiate a policy to execute all checks that are included in the policy that is assigned to this process. In *Monitoring*, you display the results of executing the policy.
- a) Choose the *Initiate Policy* tab. This starts the process automatically. Note that the process is In Process. Note the information: *Employee data will be checked against the assigned policies for this process..*
  - b) Choose the *Refresh* icon to check if this step is completed.
  - c) From the *Monitoring* tab, choose *Start* to recognize policy violations, which would be listed as alerts. The process is displayed as In Process. You can view the details, for example, alerts or employee count analysis.
  - d) To end the *Monitoring* process, choose *Confirm*.
  - e) In the system query, optionally enter a note, and confirm again with OK.
  - f) Choose the *Refresh* icon to check if this step is Completed.
6. Now you end the *Payroll* process.
- a) Choose the *End Payroll* tab. Note that the *End Payroll* process is displayed as Completed.

**Note:**

The automatic completion of this step is configurable. In the training system, it is automatically set to *start* and *confirm*.

- b)** In the system query, optionally enter a useful note, and confirm again with *OK*. *End Payroll* is displayed now as *Completed*.
- 7.** Check if the *Z## HR812: 2 - Production Payroll* process is listed in *Completed Processes*.
  - a)** Choose *Back* to return to the *Active Processes* tab. There are no active processes for January.
  - b)** Choose the *Completed Processes* tab. The *Z## HR812: 2 - Production Payroll* process is listed with a completion date and with status *OK*. This concludes the exercise - you have successfully run a *Production Payroll* process.

### **LESSON SUMMARY**

You should now be able to:

- Resolve alerts that are generated from the payroll process.

# Unit 4

## Lesson 7

### Viewing Payroll Results

#### LESSON OBJECTIVES

After completing this lesson, you will be able to:

- Describe options for Viewing Payroll Results.

#### Options for Viewing Payroll Information

Continued integration of SAP SuccessFactors with Microsoft 365 includes an option to **View My Pay Statement** directly from Microsoft Teams from the release 2H2023. This is an additional option to the existing one that allows users to navigate to the **Payroll Information** section of their **Employee File**

In Teams, users can find quick action from the main menu of the SAP SuccessFactors message extension. Users can check basic payroll information such as payout amount, gross amount, and pay date. The options **Payment Details** and **Pay History** take users to their SAP SuccessFactors system to check details.

Detailed information regarding configuration and permission requirements for View My Pay Statement with Microsoft Teams can be found via the link [New "View My Pay Statement" Action Available in Action Search | SAP Help Portal](#)

How it looks:

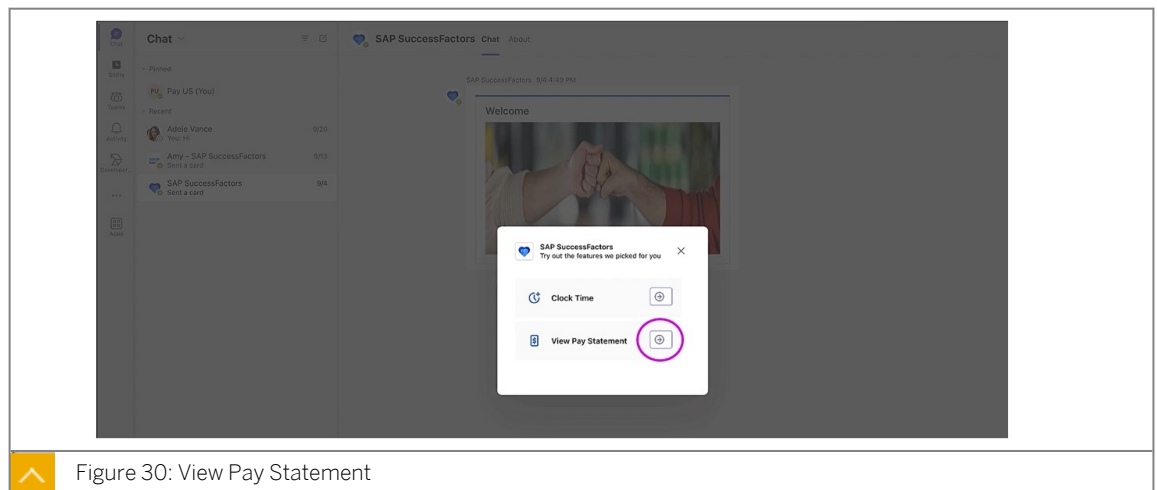

Figure 30: View Pay Statement

The screenshot shows the SAP SuccessFactors Chat interface. A pop-up window titled 'SAP SuccessFactors View Pay Statement' is displayed over a chat window. The pop-up shows the following information:

- 1,507.08 EUR** Payout
- Gross: 1,942.30 EUR
- Pay Date: Jan 1, 2020
- Buttons: Pay Statement Details, Pay History

Figure 31: Basic Payroll Information

The screenshot shows a detailed SAP Payroll statement for January 2020. The document is titled 'SAP Payroll' and includes the following sections:

- Personal Data/Organizational Data:**
  - Personnel No.: 678423 Date of Birth: Dec 10, 1976
  - Org. Center: Empty
  - Job: 1744444444
  - Factor: 0.000 Annual Exempt: 0.00
  - Region: 0.000 Annual Exempt: 0.00
  - Tax Date: 30.00 Annual Add. Amt: 0.00
  - Basic Rate Pct. 50: 0.00
  - Tax ID: 00000000000000000000
  - PI Rate: 0.30 %
  - Int. Fund: 700.00 Rate: 1.00 %
  - DELEV Key: 0111 C1 Rate: 1.7709 %
  - BI Date: 30.00 C1 Rate: 1.7709 %
- For period 01.01. to 31.01.2020:**

| Wage Type                      | Indic.       | For        | Number      | Amount   | Amount    | Annual Value |
|--------------------------------|--------------|------------|-------------|----------|-----------|--------------|
| <b>Basic Pay</b>               |              |            |             |          |           |              |
| Standard Salary                | LSG          |            |             | 2,000.00 |           |              |
| <b>Gross Remuneration</b>      |              |            |             | 2,000.00 |           | 2,000.00     |
| Total Gross (Basis)            |              |            |             | 2,000.00 |           | 2,000.00     |
| Gross Tax, Regular             |              |            |             | 2,000.00 |           | 2,000.00     |
| PI Gross, Reg                  |              |            |             | 2,000.00 |           | 2,000.00     |
| LS Gross, Regular              |              |            |             | 2,000.00 |           | 2,000.00     |
| CI Gross, Reg                  |              |            |             | 2,000.00 |           | 2,000.00     |

Figure 32: Pay Statement Details

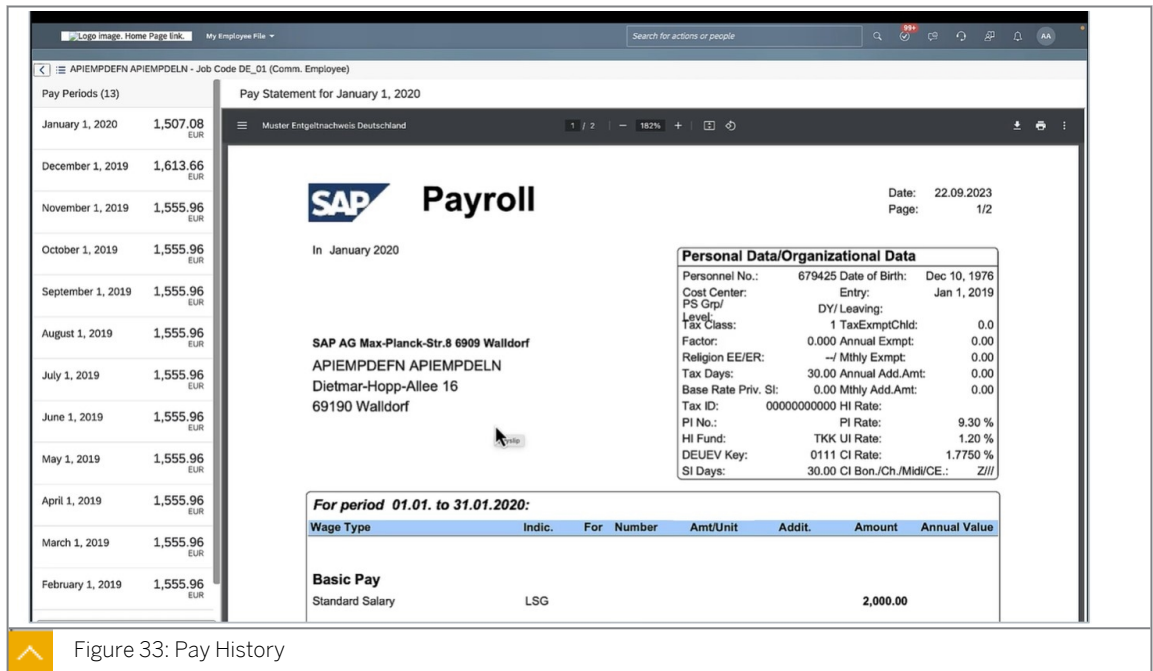

Figure 33: Pay History

### New Payroll Category in the Full Profile of the latest People Profile

In the 1H 2025 release, the **Full Profile** of the latest **People Profile** has been enhanced, including a new category called **Payroll**, which features two new cards: Pay Statement and Payroll Information.

**Pay Statements** card allows the user to view key payroll metrics for a specific employee, such as gross amount, net amount, payment date, etc. Depending on the employee's role-based permissions, the card displays up to four recent payroll statements directly for employees or by an administrator on behalf of the employee.

**Payroll Information** card allows the user to view all payroll-related information for a specific employee, either directly for the employee or by an administrator on behalf of the employee. The card displays all configured links to employees directly or to an administrator on behalf of the employee, depending on the employee's role-based permissions. All links open in a new tab.

Proxy access allows one person (the "proxy") to access another person's account (the "account owner") and act on their behalf. Since the 1H 2025 release the relevant proxy rights for the latest People Profile enable the proxy, among other things, to access all cards under the Payroll category in Full Profile, excluding the account holder's Full Profile Payroll cards

A new Payroll category and cards are available in the latest People Profile in the SAP SuccessFactors mobile apps.

### Explain My Pay Statement – Accessing and Understanding Payslip Information with Joule (SAP Business AI Assistant).

Leveraging its generative AI capabilities, Joule, SAP's AI copilot, is designed to understand user requests, retrieve relevant information, and complete tasks through a conversational experience. When integrated with SAP SuccessFactors Employee Central Payroll, Joule enables employees to easily access and understand their pay statement information.

Employees can use Joule to view a pay statement summary, including the pay date, payout amount, and gross amount, access their pay statements as PDF documents, and review payment history from active employment. In addition, Joule allows employees to request AI-

generated explanations of their most recent pay statement or to compare it with a previous pay statement.

With the Explain My Pay Statement capability, employees can ask Joule to explain specific terms, amounts, earnings, or deductions displayed on their pay statement. The explanations may include wage type names and payroll result information, depending on whether the wage type is included in the document grounding and configured policy content. Joule generates responses based on the organization's payroll context and policy documents, ensuring consistent and relevant explanations.

This AI-assisted self-service experience helps employees better understand how their pay is calculated, reduces payroll-related inquiries and support tickets, and increases overall employee satisfaction. Administrators also benefit from fewer clarification requests while maintaining control over payroll accuracy and validation processes. Joule is also available on mobile devices, making it convenient to access payroll information anytime and anywhere.

At launch, the Explain My Pay Statement feature was available in English for the United States, United Kingdom, and Australia. With each release, SAP continues to expand its country and language coverage.

As of the 1H 2026 release, the Explain My Pay Statement feature is available in the following countries and regions, with wage type texts displayed in the corresponding local languages:

| Country/Region | Local Language |
|----------------|----------------|
| Australia      | English        |
| Brazil         | Portuguese     |
| Canada         | English        |
| Canada         | French         |
| Germany        | German         |
| Mexico         | Spanish        |
| Netherlands    | Dutch          |
| United Kingdom | English        |
| United States  | English        |

Configuration Requirements and Role-Based Permission Prerequisites can be found via this link [View Pay Statements with Joule | SAP Help Portal](#).

### How it looks

This screenshot shows an example of dialogue with Joule using "The explain My Pay Statement feature, where the user enters the prompt: "Compare my payslip from last month to this month"

**Good morning!**

**Quick Actions**

- Request Time Off
- View My Profile
- View Org Chart
- Complete Payroll Tasks
- View My Learning
- View Pending Workflows
- View Reminders
- View Favorites

**Organizational Updates**

**Joule**

variable and depends on your earnings and your National Insurance category, which in your case is category A.

Compare my pay slip from last month to this month

Comparing your payslips from May and June 2025:

**Gross Pay:**

- May: £1800.00 (Monthly Salary)
- June: £3800.00 (£1800.00 Monthly Salary + £2000.00 Bonus)

**Deductions:**

- May: £210.56 (Tax: £150.40, Employee NI Contribution: £60.16)
- June: £907.56 (Tax: £550.40, Employee NI Contribution: £220.16, Student Loan: £137.00)

**Net Pay:**

- May: £1589.44
- June: £2892.44

In June, your gross pay increased due to a bonus, which led to higher tax and National Insurance contributions. Additionally, a Student Loan deduction appeared in June.

Message Joule...

Figure 34: Explain my pay statement feature: Prompt "Compare my payslip from last month to this month"

This screenshot illustrates a dialog with Joule using the "Explain my Pay Statement" feature. In this example the user asks Joule to explain a high deduction amount shown on the Pay Statement

**Good morning!**

**Quick Actions**

- Request Time Off
- View My Profile
- View Org Chart
- Complete Payroll Tasks
- View My Learning
- View Pending Workflows
- View Reminders
- View Favorites

**Organizational Updates**

**Joule**

Why are my deductions so high?

The increase in your deductions is primarily due to the increase in your gross pay due to a bonus of £2,000.00 in June. This higher taxable income resulted in a higher tax deduction (£550.40 in June compared to £150.40 in May). Additionally, your National Insurance (NI) contributions also increased due to the higher income (£220.16 in June compared to £60.16 in May). Finally, a new deduction for Student and Postgraduate Loans (£137.00) appeared in June, as your higher income has put you above the monthly threshold for Plan 2 student loan repayments. These factors combined resulted in higher deductions in your latest payslip.

What is the national insurance deduction?

The National Insurance deduction on your payslip is a contribution you make as an employee towards certain benefits and the State Pension in the UK. It's automatically deducted from your salary. For the pay period from June 1 to June 30, 2025, your National Insurance contribution was £220.16. This amount is variable and depends on your earnings and your National Insurance category, which in your case is category A.

Message Joule...

Figure 35: Explain my pay statement feature: Prompt "why is my deduction so high"

Since the 1H2025 release, user can use Joule, SAP's AI copilot, in SAP SuccessFactors Mobile apps.

### Payroll Information for Alumni

In the release 1H 2025, former employees, referred to as alumni, can view and download their pay statements as part of the alumni experience.

The alumni experience allows former employees assigned to the new alumni role to access the system after their employment has ended. In the Payroll tab, alumni can view and download pay statements, payroll and tax-related documents, and compliance-related information.

This feature was developed to provide alumni with easy access to their pay statements and payroll information following their departure from the company.

|----------------------------------------------|-----|
| Running Bank Transfer Post Payroll Processes | 101 |
| Exercise 12: Run a Bank Transfer             | 103 |

## UNIT OBJECTIVES

- Configure a posting process to submit production data to the accounting system and bank transfer process.
- Run a posting process to submit production payroll data to Financial Accounting (FI).
- Run a bank transfer.

# Configuring Posting Process to Submit Production Data

### LESSON OBJECTIVES

After completing this lesson, you will be able to:

- Configure a posting process to submit production data to the accounting system and bank transfer process.

### Posting Process Configuration

#### Posting Process Configuration

This step involves configuring the posting process and the bank transfer process. Both processes are maintained by adding a new payroll period to an existing process. This step needs to be repeated for each payroll period.

### LESSON SUMMARY

You should now be able to:

- Configure a posting process to submit production data to the accounting system and bank transfer process.

# Running Posting Process to Submit Production Data to Financial Accounting

### LESSON OBJECTIVES

After completing this lesson, you will be able to:

- Run a posting process to submit production payroll data to Financial Accounting (FI).

### Posting Process: Production Payroll Data

#### Posting Process

A posting process is carried out once the production payroll process is complete.

The payroll process manager initiates the creation of posting documents. Posting documents are created to post the payroll results to a finance system. A posting document is used by the finance system as a source document for the creation of further documents.

A production payroll data posting process consists of the following three steps:

1. Creating posting document – posting documents are created based on the production payroll results. At this point, the status of the posting document is *Created*.
2. Releasing posting documents – the status of the posting document is changed to *Released* in this step.
3. Transferring posting documents – *Released* posting documents are transferred to the financial system.

# Run a Posting Process to Submit Production Payroll Data to Financial Accounting (FI)

In Employee Central (EC), Emily Clark, as a payroll process manager, needs to execute all post payroll processes, starting from generating and transferring posting documents.

1. On the EC Home Page, select *Payroll* and *My Processes*, then *Upcoming Processes*. Here, Emily can see all processes for January of the current year that are still available. She decides to start process *Z## HR812: 3 - Posting Payroll Results*.
2. In Active Processes, the first process step *Create Posting Document* is automatically started. When the document is created, Emily can review the job log details. To move on to the next step, Emily must confirm that this step is finished properly. In addition, she can add a comment.
3. In the second process step, *Release Posting Document*, the process is automatically started. This means that the posting document is released for transfer to the financial system. Emily can review the job log details. To move on to the next step, Emily must confirm that this step is finished properly. In addition, she can add a comment.
4. In the third process step, *Transfer Posting Document*, the process is automatically started. This means that the posting document is transferred to the financial system. To complete the process, Emily must confirm that this step is finished properly. In addition, she can add a comment. Then the process is automatically moved to Completed Processes.

# Run a Posting Process to Submit Production Payroll Data to Financial Accounting (FI)

In Employee Central (EC), Emily Clark, as a payroll process manager, needs to execute all post payroll processes, starting from generating and transferring posting documents.

1. On the EC Home Page, select *Payroll* and *My Processes*, then *Upcoming Processes*. Here, Emily can see all processes for January of the current year that are still available. She decides to start process *Z## HR812: 3 - Posting Payroll Results*.
  - a) On the EC Home Page, choose *Payroll* from the *Home* dropdown list.
  - b) Choose *My Processes*, then *Upcoming Processes*.
  - c) For process *Z## HR812: 3 - Posting Payroll Results*, choose *Start*. This process now disappears from the list and is moved to the *Active Processes*.
2. In *Active Processes*, the first process step *Create Posting Document* is automatically started. When the document is created, Emily can review the job log details. To move on to the next step, Emily must confirm that this step is finished properly. In addition, she can add a comment.
  - a) Choose the *Active Processes* tab. Select the process *Z## HR812: 3 - Posting Payroll Results*. The first process step, *Create Posting Documents*, starts now automatically.
  - b) To review the job log details for this step, choose *Refresh*. The status message displays as *! Create Posting Documents finished. Confirmation is required*. Choose *See Details*, then the *Program Details* tab, and select *Posting Creation Job*. The log file is displayed for review.
  - c) Choose *Back* to return to the *Create Posting Documents* process.
  - d) To complete this step, choose *Confirm*. This is mandatory. In the popup, you can enter a useful note, such as **Posting document correct**. Choose *OK*. The status for this process is now *Completed*.
3. In the second process step, *Release Posting Document*, the process is automatically started. This means that the posting document is released for transfer to the financial system. Emily can review the job log details. To move on to the next step, Emily must confirm that this step is finished properly. In addition, she can add a comment.
  - a) Choose the *Release Posting Document* tab. The second process step, *Release Posting Document*, starts now automatically.

Note:

In this process step, you cannot select a process. You process only the one that you had selected in step 1 *Create Posting Document*.

- b) To review the job log details for this step, choose *Refresh*. The status message displays as *! Release Posting Document finished. Confirmation is required*. Choose *See Details* and select *Release Posting Document*. The process is finished.
  - c) Choose *Back* to return to the *Release Posting Document* process.
  - d) To complete this step, choose *Confirm*. This is mandatory. In the popup, you can enter a useful note, such as **Posting document released**. Choose *OK*. The status for this process is now *Completed*.
4. In the third process step, *Transfer Posting Document*, the process is automatically started. This means that the posting document is transferred to the financial system. To complete the process, Emily must confirm that this step is finished properly. In addition, she can add a comment. Then the process is automatically moved to *Completed Processes*.
- a) Choose the *Transfer Posting Document* tab. The third process step, *Transfer Posting Document*, starts now automatically.
  - b) To review the job log details for this step, choose *Refresh*. The status message displays as *! Transfer Posting Document finished. Confirmation is required*. Choose *See Details* and select *Transfer Posting Document*. The log file is displayed for review.
  - c) Choose *Back* to return to the *Transfer Posting Document* process.
  - d) To complete this step, choose *Confirm*. This is mandatory. In the popup, you can enter a useful note, such as **Generated and transferred**. Choose *OK*. The status for this process is now *Completed*.
  - e) To check if the process is completed, choose *Back* to return to *My Processes*. Note that there are no more active processes. The document has been passed on to the financial system.

### **LESSON SUMMARY**

You should now be able to:

- Run a posting process to submit production payroll data to Financial Accounting (FI).

# Running Bank Transfer Post Payroll Processes

### LESSON OBJECTIVES

After completing this lesson, you will be able to:

- Run a bank transfer.

### Bank Transfers

#### Bank Transfer Process

The payroll process manager uses the preliminary data medium exchange (pre-DME) program to evaluate the payroll results to create payment data. Creating payment data is the first step in the process of wage and salary payment.

The bank transfer process is a three-step process:

1. Create pre-DME file - the payroll process manager generates the preliminary data medium exchange (shortened DME) files.
2. Create DME file - a DME file is a data exchange file, containing all bank transactions and having the same format as the file used by the bank for your country. The final DME files will be created based on the previously created pre-DME files.
3. The DME file is used to send to the bank payment data formatted according to the banking rules of a country. The step of sending a data medium exchange file to the bank for processing is purely a customer-defined process. This could either be a manual activity to download the DME file from the application server and send it to the bank or an automated one in which the DME files are transferred to the relevant bank.

## Run a Bank Transfer

Emily Clark, as a payroll process manager, needs to generate and send bank transfers in Employee Central (EC). First she starts the generation of the bank transfer. Sending the bank transfer requires three sub-steps.

1. On the EC Home Page, from the *Home* dropdown menu, select *Payroll*. In *My Processes*, on *Upcoming Processes*, Emily starts the process-related bank transfer.
2. In *Active Processes*, the first step of the three sub-processes, *Create Pre-DME file*, is automatically started. When the file is created, Emily can review the job log details. To move on to the next step, Emily must confirm that this step is finished properly. In addition, she can add a comment.
3. In *Create DME File*, the second sub-process, is automatically started. When the file is created, Emily can review the job log details. To move on to the next step, Emily must confirm that this step is finished properly. In addition, she can add a comment.
4. In *Send DME File*, this third sub-process is automatically started. When the file is created, Emily can review the job log details, which is skipped in the exercise here. To complete the process, Emily must confirm that this step is finished properly. In addition, she can add a comment. She checks if the process is automatically moved to *Completed Processes*.

## Run a Bank Transfer

Emily Clark, as a payroll process manager, needs to generate and send bank transfers in Employee Central (EC). First she starts the generation of the bank transfer. Sending the bank transfer requires three sub-steps.

1. On the EC Home Page, from the *Home* dropdown menu, select *Payroll*. In My Processes, on *Upcoming Processes*, Emily starts the process-related bank transfer.
  - a) On the EC Home Page, choose *Payroll* from the *Home* dropdown list and select the My Processes tab.
  - b) Choose the *Upcoming Processes* tab.
  - c) For process *Z## HR812: 4 - Bank Transfer* of current year, choose *Start*. The process disappears and is moved to the *Active Processes* tab.
2. In *Active Processes*, the first step of the three sub-processes, *Create Pre-DME file*, is automatically started. When the file is created, Emily can review the job log details. To move on to the next step, Emily must confirm that this step is finished properly. In addition, she can add a comment.
  - a) Choose the *Active Processes* tab. Select the process *Z## HR812: 4 - Bank Transfer* of current year. Choose the *Create Pre-DME file* tab. The first process step, *Create Pre-DME file*, has started automatically.
  - b) To review the job log details for this step, choose *See Details*.
  - c) Choose *Refresh* until the Job is listed as *Finished*. Choose *Back* to return to the *Create Pre-DME file* tab.
  - d) To complete this step, choose *Confirm*. This is mandatory. In the popup window, you can enter a useful note, such as **Pre-DME file created**. Choose *OK*. The status for this process is now *Completed*.
3. In *Create DME File*, the second sub-process, is automatically started. When the file is created, Emily can review the job log details. To move on to the next step, Emily must confirm that this step is finished properly. In addition, she can add a comment.
  - a) Choose the *Create DME file* tab. The second process step, *Create DME file*, has started automatically.

Note:

In this process step, you cannot select a process. You process only the one which you had selected in step 1 *Create Pre-DME file*.

- b) To review the job log details for this step, choose *Refresh*, possibly twice, until the status message displays as *! Create DME file finished. Confirmation is required*.

Choose *See Details* and select the third Create Payment medium job. The log file is displayed for review.

- c) Choose *Back* twice to return to the Create DME file process.
  - d) To complete this step, choose *Confirm*. This is mandatory. In the popup, you can enter a useful note, such as **Create DME file finished**. Choose *OK*. The status for this process is now Completed.
4. In *Send DME File*, this third sub-process is automatically started. When the file is created, Emily can review the job log details, which is skipped in the exercise here. To complete the process, Emily must confirm that this step is finished properly. In addition, she can add a comment. She checks if the process is automatically moved to *Completed Processes*.
- a) Choose the *Send DME file* tab. The third process step, Send DME file, has started automatically.
  - b) To proceed with this step, choose *Refresh*, possibly twice, until the status message displays as *! Send DME file finished. Confirmation is required*.
  - c) To complete this step, choose *Confirm*. This is mandatory. In the popup, you can enter a useful note, such as **Bank transfer done**. Choose *OK*. The status for this process is now Completed.
  - d) To return to *My Processes*, choose *Back*.
  - e) Choose *Completed Processes*. The status of process *Z## HR812: 4 - Bank Transfer* of current year is *OK*.

### **LESSON SUMMARY**

You should now be able to:

- Run a bank transfer.

### UNIT OBJECTIVES

- Run an ad-hoc off-cycle process.

# Unit 6

## Lesson 1

## Running Off-Cycle Payroll Processes

### LESSON OBJECTIVES

After completing this lesson, you will be able to:

- Run an ad-hoc off-cycle process.

### Requirements for Running an Ad Hoc Off-Cycle Process

#### Running an Ad Hoc Off-Cycle Payroll Process

Outside of the regular payroll cycle, payroll departments are faced with requirements for special processes, such as bonuses, one-off payments, reversing the payroll results, etc.

To meet these business needs, SAP provides the functionality of Off-cycle.

- This functionality allows payroll teams to run payroll for bonuses, one-time payments, or advance payments.

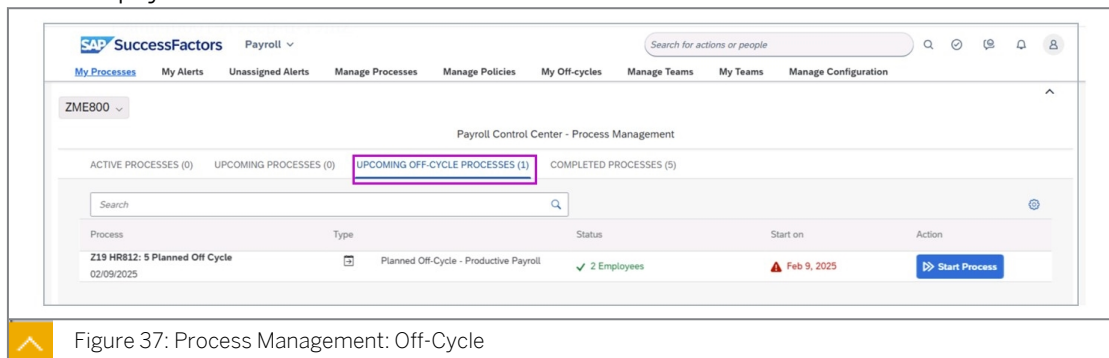

Figure 37: Process Management: Off-Cycle

- The functionality can also be used to run the correction payroll run after master data changes have been completed.

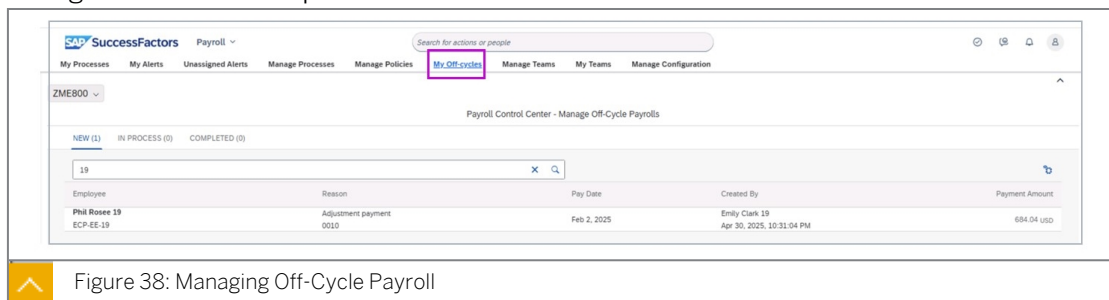

Figure 38: Managing Off-Cycle Payroll

- This allows businesses the possibility to make a payment to employees outside of the planned payroll and provides full traceability.

### The My Off-Cycles User interface

The payroll manager can run off-cycle processes using the *My Off-Cycles* user interface. Some of the covered scope of functionality within the *My Off-Cycles* tab are the following use cases:

- Individual bonus payments
- Correction payroll when changes have been made to the employee master data
- Vacation payment
- Regular pay period on demand

If any of the above-mentioned use cases are applicable, a separate process is created for planned off-cycle and the subsequent ad hoc off-cycle process.

- Payroll process managers use the My Off-Cycles application to create ad hoc off-cycle requests on a single-employee basis or run a planned off-cycle process that selects all the relevant employees for the off-cycle process.
- A successfully created ad hoc request includes an off-cycle payroll run and registration to the subsequent ad hoc off-cycle process. Multiple requests can be registered to the same upcoming ad hoc off-cycle process.
- The process is deemed to be complete only when the subsequent activities to the ad hoc off-cycle payroll process, such as Create Posting Documents (Off-Cycle), Release Posting Document (Off-Cycle), and Transfer Posting Document (Off-Cycle), are complete.

**Note:**

Whether, when, and how off-cycle functionality is used, in general, depends on the legal requirements and practices in a particular country. You can get information about the most important legal changes in Employee Central Payroll, including off-cycle in this overview.

Please refer to the [most recent entry in the What's New Viewer](#)

**Configuration Requirements**

To find more information about a legal change, go to the [Announcement of Legal Changes tool](#)

| Country/Region | Product            | Component | My Completion Status | SAP Solution Status | SAP Note | Planned Delivery Date | Publication Date |
|----------------|--------------------|-----------|----------------------|---------------------|----------|-----------------------|------------------|
| Germany (DE)   | SAP SuccessFactors |           | New                  | Planned             |          | 01.01.2024            | 21.07.2022       |
| Germany (DE)   | SAP SuccessFactors |           | New                  | Planned             |          | 07.12.2023            | 13.11.2023       |

Figure 39: Country Specific Legal Change Tool

Choose *SAP SuccessFactors* in *Products* and the *Country/Region* you're interested in.

The system needs to be updated to the recommended Support Package, in which the legal change is delivered.

## Run an Ad Hoc Off-Cycle Process for Employees Who Require Retroactive Pay Part 1

Emily Clark, in her role as payroll process manager, needs to start an ad hoc off-cycle process to pay a spot bonus.

1. To start an ad hoc off-cycle (OC) process to pay a spot bonus, Emily inserts a *Performance Bonus* in the Compensation section on Employee Central (EC) for Mark Brown ##. The issue date is the second Monday in January, current year. The spot bonus value is USD 1000.

# Run an Ad Hoc Off-Cycle Process for Employees Who Require Retroactive Pay Part 1

Emily Clark, in her role as payroll process manager, needs to start an ad hoc off-cycle process to pay a spot bonus.

1. To start an ad hoc off-cycle (OC) process to pay a spot bonus, Emily inserts a *Performance Bonus* in the Compensation section on Employee Central (EC) for Mark Brown ##. The issue date is the second Monday in January, current year. The spot bonus value is USD 1000.
  - a) On the EC Home Page, in the *Command* bar, enter **Mark Brown ##** and choose him.
  - b) Choose the *Compensation* section.
  - c) Locate *Spot Bonus* tile in the Compensation section.
  - d) To create the spot bonus, choose the *Pencil* icon, *Edit Spot Bonus*, and then choose *Add Spot Bonus*.
  - e) As *Issue Date*, choose the second Monday of January of the current year from the calendar picker.
  - f) As *Type*, choose *Performance Bonus (PERF-BONUS)*.
  - g) Make sure that the currency is USD.
  - h) As *Value*, enter **1000** and save your entries.

# Run an Ad Hoc Off-Cycle Process for Employees Who Require Retroactive Pay Part 2

After the payroll period for January of the current year is closed, Emily Clark realizes that the payment for employee Mark Brown ## (ECP-EMP-##) is not correct. It missed an additional payment. This requires an ad hoc off-cycle process for employees who require retroactive payment.

1. On the Employee Central (EC) Home Page, open *Payroll* and *Manage Processes*. Create a new ad hoc off-cycle process for the payroll area with the name Z##\_ AdHoc\_OC for payroll area ECP Monthly Pay ## for the off-cycle reason 0010 Adjustment payment. The payment date is the first Monday in February of the current year.
2. On the EC Home Page, open *Payroll* and *My Off-cycles*. Create a new off-cycle request for employee, Mark Brown ## (ECP-EMP-##), with *Adjustment payment (0010)* as the reason. Review the adjustment results. Determine the first Monday in February of the current year as the pay date. Review, check, and save the request.
3. On the *My Processes* tab, Emily now checks in *Upcoming Off-Cycle Processes* if the new request has been added. She also wants to check the process details of the new request.

# Run an Ad Hoc Off-Cycle Process for Employees Who Require Retroactive Pay Part 2

After the payroll period for January of the current year is closed, Emily Clark realizes that the payment for employee Mark Brown ## (ECP-EMP-##) is not correct. It missed an additional payment. This requires an ad hoc off-cycle process for employees who require retroactive payment.

1. On the Employee Central (EC) Home Page, open *Payroll* and *Manage Processes*. Create a new ad hoc off-cycle process for the payroll area with the name Z##\_ AdHoc\_OC for payroll area ECP Monthly Pay ## for the off-cycle reason 0010 Adjustment payment. The payment date is the first Monday in February of the current year.
  - a) On the EC Home Page, choose *Payroll* from the *Home* dropdown list, and *Manage Processes*.
  - b) To create a *New Off-Cycle Request*, choose *Add Process* and the + icon.
  - c) Select the following process type: Z##\_5\_Prod\_ADH\_OffCycle (Example - USA Adhoc Off-Cycle payroll subsequent activities ). Use the data from the following table:

| Field Name                  | Value                                                                           |
|-----------------------------|---------------------------------------------------------------------------------|
| Name                        | Z##_ HR812:5 Prod Ad Hoc OC payroll subsequent activities                       |
| Payroll Area                | Choose +, select ECP Monthly Pay ##                                             |
| Off-cycle reason            | Choose +, select Adjustment payment 0010                                        |
| Payment date in Recurrences | In the calendar picker, select the first Monday in February of the current year |

- d) To save your entries, choose *Validate* and *Save*.
2. On the EC Home Page, open *Payroll* and *My Off-cycles*. Create a new off-cycle request for employee, Mark Brown ## (ECP-EMP-##), with *Adjustment payment (0010)* as the reason. Review the adjustment results. Determine the first Monday in February of the current year as the pay date. Review, check, and save the request.
  - a) On the EC Home Page, choose *Payroll* from the Home dropdown list.
  - b) Choose the *My Off-cycles* tab. Here, make sure to continue in the *New* tab.
  - c) Choose + to add a new off-cycle request.

- d) As the employee, select Mark Brown (ECP-EMP-##).
  - e) Choose *Step 2*.
  - f) As the reason, select *Adjustment payment 0010*.
  - g) Choose *Step 3*.
  - h) Review the *Adjustment Result*. No edits are required for this step.
  - i) Choose *Step 4*.
  - j) Select the first Monday in February of the current year from the calendar picker.
  - k) Choose *Review*. If required, you can change entries in the review step.
  - l) To continue, choose *Check Request*.
  - m) To complete the creation of the new off-cycle request, choose *Save Request*.
3. On the *My Processes* tab, Emily now checks in *Upcoming Off-Cycle Processes* if the new request has been added. She also wants to check the process details of the new request.
- a) Choose the *My Processes* tab.
  - b) To check if the new request has been added, choose *Upcoming Off-Cycle Processes*. The new request is listed as Z## HR812:6 Prod\_ADH\_OffCycle.
  - c) To check the details of the new request, select the request. You can review details about process steps such as the following:
    - Create Posting Documents (Off-Cycle)
    - Release Posting Document (Off-Cycle)
    - Transfer Posting Document (Off-Cycle)
    - Create Pay Slip (Off-Cycle)
    - Print Pay Slip (Off-Cycle)
    - Create Pre-DME File (Off-Cycle)
    - Create DME File (Off-Cycle)
    - Send DME File

**Note:**

You have encountered all of these steps in the previous exercises when executing the subsequent activities for regular payroll. Processing for ad hoc off-cycle payroll differs from the regular payroll only in that all subsequent activities are combined into one process.

- d) Choose *Back* after completing the review.

## Unit 6

### Exercise 15

# Run a Planned Off-Cycle Process for an Employee Part 1

Emily Clark, in her role as payroll process manager, would like to start a planned off-cycle process to pay a spot bonus.

1. To start a planned off-cycle (OC) process to pay a spot bonus, Emily inserts an off-cycle bonus (annual) (OC\_BONUS\_ANN) in the compensation section on Employee Central (EC) for Mark Brown (ECP-EMP-##) and Phil Rosee (ECP-EE-##). The issue date is the second Monday of February in the current year, and the bonus values are \$5,000 and \$4,000, respectively.

To create an entry, use the following information:

| Mark Brown (ECP-EMP-##) |                                                                          |
|-------------------------|--------------------------------------------------------------------------|
| Issue Date              | Select the second Monday in February of the current year in the calendar |
| Type                    | Off Cycle Bonus (Annual)<br>(OC_BONUS_ANN)                               |
| Currency Code           | USD                                                                      |
| Value                   | 5000                                                                     |

2. Repeat the same steps for Phil Rosee (ECP-EE-##). His bonus amount should be 4000 USD. Emily inserts an Off Cycle Bonus (Annual) (OC\_BONUS\_ANN) in the compensation portlet on Employee Central for Phil Rosee (ECP-EE-##). To create an entry, use the information from the following table.

To create an entry, use the following information:

| Phil Rosee (ECP-EE-##) |                                                                                 |
|------------------------|---------------------------------------------------------------------------------|
| Issue Date             | Select the second Monday in February of the current year in the Calendar Picker |
| Type                   | Off Cycle Bonus (Annual)<br>(OC_BONUS_ANN)                                      |
| Currency Code          | USD                                                                             |
| Value                  | 4000                                                                            |

## Run a Planned Off-Cycle Process for an Employee Part 1

Emily Clark, in her role as payroll process manager, would like to start a planned off-cycle process to pay a spot bonus.

1. To start a planned off-cycle (OC) process to pay a spot bonus, Emily inserts an off-cycle bonus (annual) (OC\_BONUS\_ANN) in the compensation section on Employee Central (EC) for Mark Brown (ECP-EMP-##) and Phil Rosee (ECP-EE-##). The issue date is the second Monday of February in the current year, and the bonus values are \$5,000 and \$4,000, respectively.

To create an entry, use the following information:

| Mark Brown (ECP-EMP-##) |                                                                          |
|-------------------------|--------------------------------------------------------------------------|
| Issue Date              | Select the second Monday in February of the current year in the calendar |
| Type                    | Off Cycle Bonus (Annual)<br>(OC_BONUS_ANN)                               |
| Currency Code           | USD                                                                      |
| Value                   | 5000                                                                     |

- a) On the EC Home Page, in the *Action Search*, enter Mark Brown (ECP-EMP-##) and choose him.
  - b) Choose the *Compensation* section.
  - c) Choose Spot Bonus tile.
  - d) To create the spot bonus, choose the *Pencil* icon, *Edit Spot Bonus*, and then choose *Add Spot Bonus*.
  - e) As the Issue Date, choose the second Monday of February of the current year from the calendar picker.
  - f) As Type, choose Off Cycle Bonus (Annual) (OC\_BONUS\_ANN).
  - g) Make sure that the currency is **USD**.
  - h) As Value, enter **5000**. Save your entries.
2. Repeat the same steps for Phil Rosee (ECP-EE-##). His bonus amount should be 4000 USD. Emily inserts an Off Cycle Bonus (Annual) (OC\_BONUS\_ANN) in the compensation portlet on Employee Central for Phil Rosee (ECP-EE-##). To create an entry, use the information from the following table.

To create an entry, use the following information:

| Phil Rosee (ECP-EE-##) |                                                                                 |
|------------------------|---------------------------------------------------------------------------------|
| Issue Date             | Select the second Monday in February of the current year in the Calendar Picker |
| Type                   | Off Cycle Bonus (Annual)<br>(OC_BONUS_ANN)                                      |
| Currency Code          | USD                                                                             |
| Value                  | 4000                                                                            |

- a) On the EC Home Page, in the *Action Search*, enter Phil Rosee (ECP-EE-##) and choose him.
- b) Choose the *Compensation* section.
- c) Locate Spot Bonus tile.
- d) To create the spot bonus, choose *Add* button.
- e) As the Issue Date, choose the second Monday of February of the current year from the calendar picker.
- f) As Type, choose Off Cycle Bonus (Annual) (OC\_BONUS\_ANN).
- g) Make sure that the currency is **USD**.
- h) As *Value*, enter **4000**. Save your entries.

## Unit 6

### Exercise 16

## Run a Planned Off-Cycle Process for an Employee Part 2

After the payroll period for January of the current year is closed, Emily Clark has to pay an additional payment for employees Mark Brown (ECP-EMP-##) and Phil Rosee (EMP-EE-##). This requires a planned Off-Cycle Payroll Run.

1. On the Employee Central (EC) Home Page, open *Payroll and Manage Processes*. Create a new planned off-cycle process for the payroll area with the name Z##\_6\_Prod\_Planned\_Offcycle based on the process for payroll area ECP Monthly Pay ## for the off-cycle reason bonus payment (0001) and payment date as the second Monday in February of the current year.

Use the data from the following table when creating a process:

| Field Name                   | Value                                                      |
|------------------------------|------------------------------------------------------------|
| Process Type                 | Choose +. Select Z##_6_Prod_Planned_Offcycle from the list |
| Name                         | Z##_ HR812: 5 Planned Off Cycle                            |
| Payroll Area                 | ECP Monthly Pay ##                                         |
| Off-cycle reason             | Bonus Payment (0001)                                       |
| Policies                     | Z##_HR812 - Planned Off-Cycle Alerts                       |
| Team                         | ECP-TL-##, ECP-TM-##                                       |
| Analytics                    | HR812 Analytics for Planned OC                             |
| Payment Date, in Recurrences | The second Monday of February of the current year          |
| Pay ID                       | Z                                                          |

To save your entries, choose *Validate* and *Save*.

2. On the *My Processes* tab, Emily now checks in *Upcoming Off-Cycle* processes if the new process has been added. She also wants to check the details of the new process.

## Run a Planned Off-Cycle Process for an Employee Part 2

After the payroll period for January of the current year is closed, Emily Clark has to pay an additional payment for employees Mark Brown (ECP-EMP-##) and Phil Rosee (EMP-EE-##). This requires a planned Off-Cycle Payroll Run.

1. On the Employee Central (EC) Home Page, open *Payroll* and *Manage Processes*. Create a new planned off-cycle process for the payroll area with the name Z##\_6\_Prod\_Planned\_Offcycle based on the process for payroll area ECP Monthly Pay ## for the off-cycle reason bonus payment (0001) and payment date as the second Monday in February of the current year.

Use the data from the following table when creating a process:

| Field Name                   | Value                                                      |
|------------------------------|------------------------------------------------------------|
| Process Type                 | Choose +. Select Z##_6_Prod_Planned_Offcycle from the list |
| Name                         | Z## HR812: 5 Planned Off Cycle                             |
| Payroll Area                 | ECP Monthly Pay ##                                         |
| Off-cycle reason             | Bonus Payment (0001)                                       |
| Policies                     | Z##_HR812 - Planned Off-Cycle Alerts                       |
| Team                         | ECP-TL-##, ECP-TM-##                                       |
| Analytics                    | HR812 Analytics for Planned OC                             |
| Payment Date, in Recurrences | The second Monday of February of the current year          |
| Pay ID                       | Z                                                          |

To save your entries, choose *Validate* and *Save*.

- a) Follow the instructions from step 1.
2. On the *My Processes* tab, Emily now checks in *Upcoming Off-Cycle* processes if the new process has been added. She also wants to check the details of the new process.
    - a) Choose the *My Processes* tab.
    - b) To check if the new process has been added, choose *Upcoming Off-Cycle* processes. The new process is listed as Z## HR812: 5 Prod\_Planned\_OffCycle. Make sure that the

status column of this process contains a green check mark, and that the number of employees (2) is displayed. For these employees, the planned off-cycle calculation will be performed.

- c) To run the process, choose *Start process*.
- d) You can find process Z## HR812: 5 Prod\_Planned\_OffCycle in the *Active process* tab. You can review details about process steps such as the following:
  - Run Payroll (Off-Cycle)
  - Posting Simulation (Off-Cycle)
  - Initiate Policy (New)
  - Monitoring

## Unit 6

### Exercise 17

# Run a Planned Off-Cycle Process for an Employee Part 3 (optional)

Once the Planned Off-Cycle Process is completed, a Payroll Process for Subsequent activities, such as posting and generating a bank file, can be created and executed.

1. On the Employee Central (EC) Home Page, open *Payroll* and *Manage Processes*. Create a new Planned Off-Cycle Posting and Bank Filing Process for the payroll area with the name **Z## HR812 7 Planned Off-Cycle Payroll Posting and Bank Filing** based on the process **Z## HR812 5 Planned Off-Cycle Payroll Process**.

Use the data from the following table when creating a process:

| Field Name                                | Value                                                                                                |
|-------------------------------------------|------------------------------------------------------------------------------------------------------|
| Process Type                              | Choose +. Select <b>Z## 7 Off-cycle Payroll Posting and Bank Filing</b> from the list                |
| Name                                      | <b>Z## HR812: 7 Planned Off-Cycle Payroll Posting and Bank Filing</b>                                |
| Parent Off-Cycle Process                  | Choose <b>Z## HR812: 5 Productive planned off-cycle payroll</b> from the pick list                   |
| Payroll Area                              | ECP Monthly Pay ## (filled automatically)                                                            |
| Off-cycle reason                          | Bonus Payment (0001) (filled automatically)                                                          |
| Off-cycle payroll payment date and Pay ID | The second Monday of February of the current year (filled automatically)<br>Z (filled automatically) |

To save your entries, choose *Validate* and *Save*.

2. On the *My Processes* tab, Emily now checks in *Upcoming Off-Cycle* processes if the new process has been added. She also wants to check the details of the new process.

## Run a Planned Off-Cycle Process for an Employee Part 3 (optional)

Once the Planned Off-Cycle Process is completed, a Payroll Process for Subsequent activities, such as posting and generating a bank file, can be created and executed.

1. On the Employee Central (EC) Home Page, open *Payroll* and *Manage Processes*. Create a new Planned Off-Cycle Posting and Bank Filing Process for the payroll area with the name Z## HR812 7 Planned Off-Cycle Payroll Posting and Bank Filing based on the process Z## HR812 5 Planned Off-Cycle Payroll Process.

Use the data from the following table when creating a process:

| Field Name                                | Value                                                                                                |
|-------------------------------------------|------------------------------------------------------------------------------------------------------|
| Process Type                              | Choose +. Select Z## 7 Off-cycle Payroll Posting and Bank Filing from the list                       |
| Name                                      | Z## HR812: 7 Planned Off-Cycle Payroll Posting and Bank Filing                                       |
| Parent Off-Cycle Process                  | Choose Z## HR812: 5 Productive planned off-cycle payroll from the pick list                          |
| Payroll Area                              | ECP Monthly Pay ## (filled automatically)                                                            |
| Off-cycle reason                          | Bonus Payment (0001) (filled automatically)                                                          |
| Off-cycle payroll payment date and Pay ID | The second Monday of February of the current year (filled automatically)<br>Z (filled automatically) |

To save your entries, choose *Validate* and *Save*.

2. On the *My Processes* tab, Emily now checks in *Upcoming Off-Cycle* processes if the new process has been added. She also wants to check the details of the new process.
  - a) Choose the *My Processes* tab.
  - b) To check if the new process has been added, choose *Upcoming Off-Cycle* processes. The new process is listed as Z## HR812 7 Planned Off-Cycle Payroll Posting and Bank Filing.
  - c) To run the process, choose *Start process*.
  - d) You can find process Z## HR812 7 Planned Off-Cycle Payroll Posting and Bank Filing in the *Active process* tab. You can review details about process steps, such as the following:

- Create Posting Documents (Off-Cycle)
- Release Posting Documents (Off-Cycle)
- Transfer Posting Documents (Off-Cycle)
- Create Pre-DME file (Off-Cycle)
- Create DME file (Off-Cycle)
- Send DME file

### **LESSON SUMMARY**

You should now be able to:

- Run an ad-hoc off-cycle process.

# UNIT 7

# Understanding Payroll Auditing

## Lesson 1

Auditing the Payroll Process

130

Exercise 18: Audit Payroll Process Transactions

131

## UNIT OBJECTIVES

- Review payroll process transactions with the payroll audit tile.

# Unit 7

## Lesson 1

### Auditing the Payroll Process

#### LESSON OBJECTIVES

After completing this lesson, you will be able to:

- Review payroll process transactions with the payroll audit tile.

#### Auditing for Payroll Process Transactions

##### Auditing Payroll Process Transactions

It is imperative for the payroll process to have an audit mechanism. Payroll Control Center addresses this by providing the audit functionality to analyze the executed processes, alerts generated, and analytics history. This provides transparency over who did what.

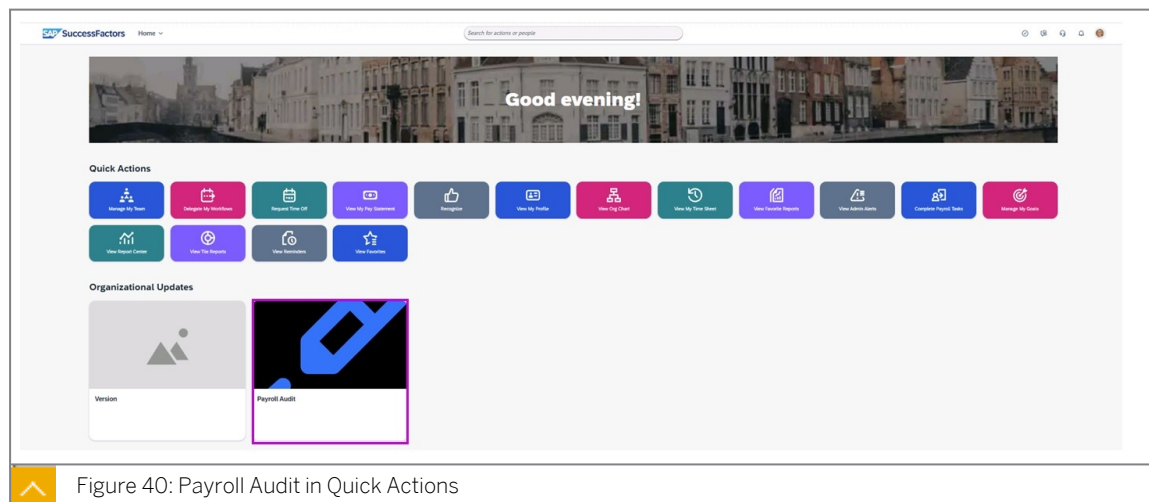

Figure 40: Payroll Audit in Quick Actions

The audit files can be downloaded and can be stored locally for audit purposes if you need. This may be required if you are running a huge number of processes within Payroll Control Center and want to delete old processes. Ensure that you download the audit file for the delete processes.

# Audit Payroll Process Transactions

In Employee Central (EC), Emily Clark is now displaying the Payroll Control Center (PCC) audit trail.

1. Emily selects the *PCC - Payroll Audit* tile from her EC Home Page. Here you can review Active Processes and Completed Processes. With the audit trail, she has visibility on the process, alerts, and analytics history. She understands which actions had been performed and by whom. She can download the log as a Microsoft Excel file. Separate exports are available by process, alerts, and analytics history.

# Audit Payroll Process Transactions

In Employee Central (EC), Emily Clark is now displaying the Payroll Control Center (PCC) audit trail.

1. Emily selects the *PCC - Payroll Audit* tile from her EC Home Page. Here you can review Active Processes and Completed Processes. With the audit trail, she has visibility on the process, alerts, and analytics history. She understands which actions had been performed and by whom. She can download the log as a Microsoft Excel file. Separate exports are available by process, alerts, and analytics history.
  - a) On the Employee Central home page, choose *Payroll Audit*. Choose *Completed Processes*.
  - b) Choose the *Z## HR812: 1 - Pre-Payroll (Monitoring)* process. Now you have visibility on the process, alerts, and analytics history. You can understand what actions are performed and by whom.
  - c) To download the Alert history, go to the *Alerts History* tab. Then, choose the *Download complete alert history* button. Reports for process, alerts, and analytics are separately downloaded.
  - d) To download a report of each audit/history, go to their respective tabs and choose one of the following:
    - *Download complete process history* button
    - *Download complete alerts history* button
    - *Download complete analytics history* button

## LESSON SUMMARY

You should now be able to:

- Review payroll process transactions with the payroll audit tile.

# UNIT 8

## Planning Next Steps

### Lesson 1

Earning SAP SuccessFactors Expert (SFX) Accreditation

137

### Lesson 2

Reviewing Additional Resources

139

### UNIT OBJECTIVES

- Describe the SFX Accreditation program.
- Review additional resources after completing this course.

# Earning SAP SuccessFactors Expert (SFX) Accreditation

### LESSON OBJECTIVES

After completing this lesson, you will be able to:

- Describe the SFX Accreditation program.

### SAP SuccessFactors Expert (SFX) Accreditation

After completing this Administration course, it is highly recommended that you take the associated product SAP SuccessFactors eXpert (SFX) Accreditation exam.

The SAP SuccessFactors eXpert (SFX) Accreditation Program is a set of exams that allow trained and knowledgeable customer administrators to earn accreditation in the administration of SAP SuccessFactors products. To learn more about the SFX Program, please access [Training and SFX Overview](#).

#### Note:

Currently, SFX exams are accessed in the SAP SuccessFactors Administrator Learning Center (SFALC). SFALC requires customer authentication using an S-user ID and a one-time registration. Please see this guide for detailed instructions: [SAP SuccessFactors Training and SFX Quick Start Guide](#).

Benefits of earning SFX Accreditations for an administrator:

- Take greater ownership of the usage of the organization's SAP SuccessFactors solutions
- Ability to make confident decisions during the implementation process and post go-live
- Earn a digital badge which can be proudly displayed on e-mail signature and professional profiles

Benefits for a company when administrators earn SFX Accreditations:

- Optimize usage of SAP SuccessFactors solutions to better support company HR processes
- Greater alignment of HR strategies with ongoing software release updates
- Optimize the full value of the cloud by increasing organizational independence

## Summary

- The benefits of earning an SFX Accreditation include: greater ownership of the organization's SAP SuccessFactors solution(s), make more confident decisions during implementation, earn a digital badge.
- The benefits for a company of having accredited administrators include optimal usage of SAP SuccessFactors solutions and greater alignment of HR strategies with software release updates.

### LESSON SUMMARY

You should now be able to:

- Describe the SFX Accreditation program.

## Reviewing Additional Resources

### LESSON OBJECTIVES

After completing this lesson, you will be able to:

- Review additional resources after completing this course.

### Additional Resources

#### Downloadable Training Course PDFs

To download PDF versions of any Project Team Orientation (PTO) or Administration (Admin) training courses, please access the direct links in this guide:

[SAP SuccessFactors HCM Downloadable Training Guide](#).

#### The SAP SuccessFactors HCM Customer Community

Now that you have learned about the basic functionality of your SAP SuccessFactors solution, it is recommended that you review the resources available to you in the SAP SuccessFactors HCM Customer Community.

The SAP SuccessFactors HCM Customer Community is your one-stop shop for product support, Q&A, training, and expert accreditation (SFX), Product Release & Road Map information, events, and more.

Engagement through the online customer community adds profound value to your success. Access public and private (customer authentication required) content linked from the main landing page: [SAP SuccessFactors HCM Community](#).

#### Helpful Resources

For more information about SAP SuccessFactors, refer to these additional resources:

- [SAP SuccessFactors Human Capital Management \(HCM\) Learning](#): Discover HCM learning resources
- [SAP SuccessFactors Help Portal](#): Find product-specific documentation (admin and implementation guides, etc.)
- [SAP SuccessFactors Release Information](#): Access the latest release resources (documentation, Q&A sessions, etc.)
- [SAP SuccessFactors Community](#): Explore SAP SuccessFactors' latest updates, product, and release information, engage with other customers and experts, find upcoming events, explore training options, and more
- [SAP SuccessFactors Training & Expert Accreditation \(SFX\)](#): Explore and access customer training options and SFX accreditation

- [SAP Training Shop](#): View the upcoming training course schedules, digital learning options, SAP Certification, and more
- [SAP Roadmap Explorer](#): Discover the planned SAP SuccessFactors release innovations
- [SAP Architecture Leading Practices](#): Access recommended configuration decisions and guidance related to SAP SuccessFactors implementations
- [SAP Implementation Design Principles](#): View structured guidance addressing challenging customer requirements and questions occurring during the design and implementation phases of the project
- [Embedded Launch Activities \(EmLA\) for SAP SuccessFactors](#): Help to enable and prepare your project team for your cloud deployment

Note:

The best practice is to check resources frequently, as they are continuously updated and improved.

Note:

Some content in the SAP SuccessFactors HCM Community, SAP Help Portal, and other referenced resources may not be available unless you log in with your SAP Universal ID, which serves as a single entry point to various SAP resources. You can create one here, and associate your existing S-User Accounts: <https://www.sap.com/account/universal-id.html>.

If you don't have an existing S-User, you can follow this link: <http://service.sap.com/request-user>

## The What's New Viewer

### Definitions

The **What's New Viewer**(WNV) is both a framework and a web page:

- All SAP products share the framework, a database of release notes, a front-end web experience, and a subscription system.
- SAP SuccessFactors inserts its release notes into the framework and configures the front-end web experience for our customers' needs.

**Release Notes** are the individual rows and topics you see when you click *Read More*.

### Recommended Actions

We recommend that you do these things now:

- Subscribe to the What's New Viewer: [Subscribing to What's New Viewer Changes | SAP Help Portal](#).
- Bookmark the What's New Viewer in a desktop browser: [SAP SuccessFactors What's New | SAP Help Portal](#).
- Bookmark the [Product Release and Road Map Information](#) page.

- Bookmark the [Product and Customer Updates](#) page (authentication with S-user ID required).

### **What's New Viewer Audience**

The What's New Viewer is constructed for administrators first, partners second, and the broader public third because it helps people who:

- Maintain their organization's business processes.
- Configure enhancements to innovate on behalf of their organizations.

We recognize that other roles might want to know what's new in a release. SAP SuccessFactors creates content that can be consumed by other audiences. For example, a Chief Human Resources Officer (CHRO) probably doesn't need the details in the What's New Viewer. SAP SuccessFactors creates the Release Highlights for that audience.

### **Access to the What's New Viewer**

Anyone on the internet can see the SAP SuccessFactors What's New Viewer. We make it public so you can share links with anyone, whether they have an account in the SAP Help Portal or not.

We recommend, however, that you create a Help Portal account to access features like subscription and favoriting your filters.

### **What to Expect from the Content in the What's New Viewer**

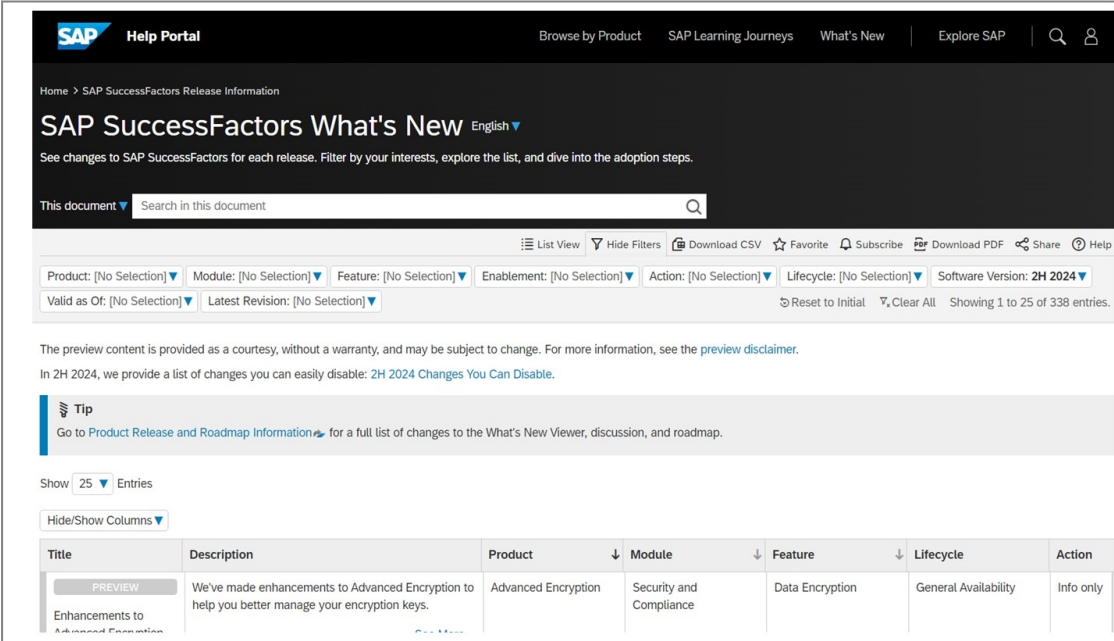

The What's New Viewer content helps you understand:

- How a change impacts your configuration or current business processes.
- How a change shifts configuration or behavior in your system.
- Where you can get help with configuration.

### **Two Views of the What's New Viewer**

The What's New Viewer has two views: **summary** and **details**.

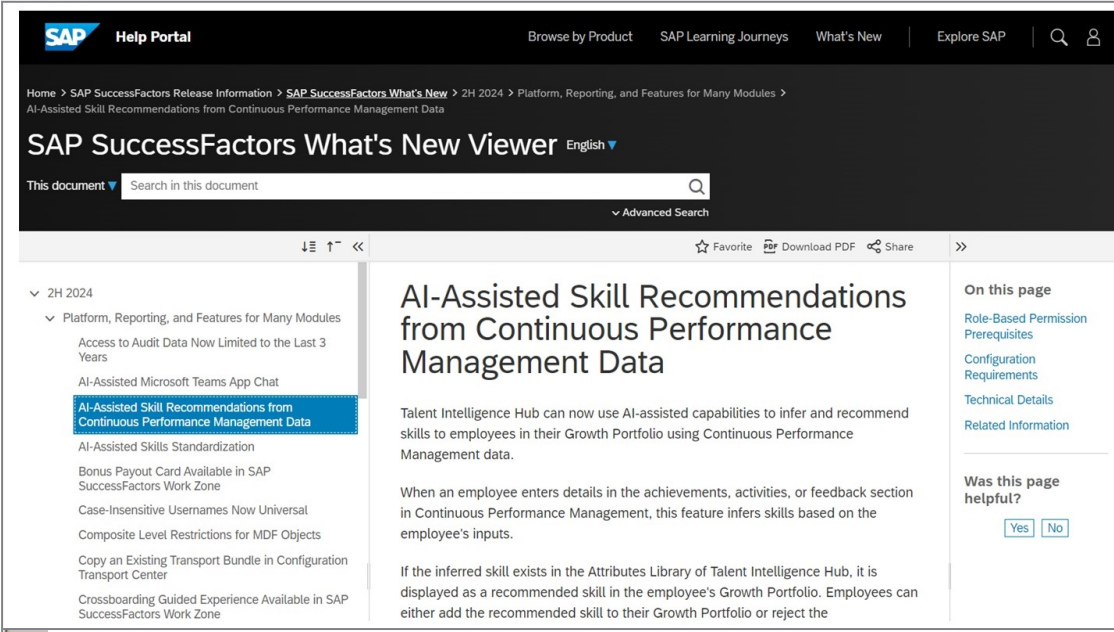

The summary view shows you the release notes at a glance. You see the title, a short description, and the metadata, which you can use to sort and filter. A list view is also available, but isn't used as often by the SAP SuccessFactors audience.

The screenshot shows the SAP SuccessFactors What's New Summary Table View. The header includes the SAP logo, 'Help Portal', and navigation links: 'Browse by Product', 'SAP Learning Journeys', 'What's New', and 'Explore SAP'. Below the header, there's a search bar and a list of filters: Product, Module, Feature, Enablement, Action, Lifecycle, and Software Version. The table displays a list of updates, with the first entry highlighted: 'Enhancements to Advanced Encryption'. The table has columns for Title, Description, Product, Module, Feature, Lifecycle, and Action. A 'Tip' box is present, and a 'Show 25 Entries' button is visible. The bottom of the screenshot shows a yellow arrow pointing up and the caption 'Figure 41: Summary Table View'.

Figure 41: Summary Table View

The details view appears when you select a *See More* link in the summary view. The details view is the full release notes and includes links to even more information. The links are collected in one place at the bottom of the page.

The screenshot shows the SAP SuccessFactors What's New Viewer Details View. The header is similar to the summary view. The main content area displays the title 'AI-Assisted Skill Recommendations from Continuous Performance Management Data'. Below the title, there's a description of the feature and its benefits. A sidebar on the left lists various updates, with the current one highlighted. On the right, there's a section titled 'On this page' with links to 'Role-Based Permission Prerequisites', 'Configuration Requirements', 'Technical Details', and 'Related Information'. At the bottom right, there's a 'Was this page helpful?' section with 'Yes' and 'No' buttons. The bottom of the screenshot shows a yellow arrow pointing up and the caption 'Figure 42: Details View'.

Figure 42: Details View

## Navigating the Summary View

The SAP SuccessFactors What's New Viewer content is a selection out of the What's New database. To navigate the What's New Viewer, it helps to think of it as a database front-end.

## Basic Navigation

You can get help with the What's New Viewer by selecting the *Help* button.

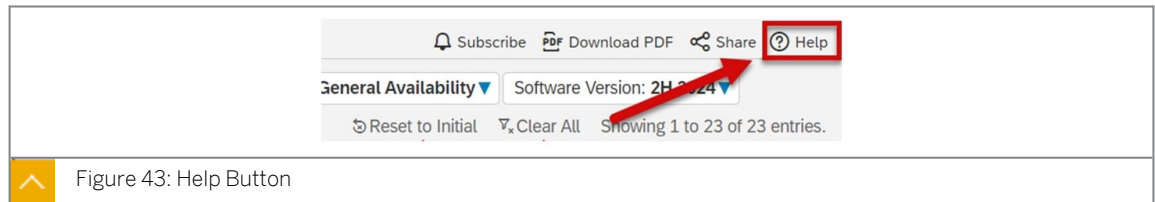

Figure 43: Help Button

### The Preview Label

If you see a **Preview** label, the feature, enhancement, or change is not yet delivered to your production environment. For example, if SAP SuccessFactors publishes the What's New Viewer in April and describes changes that affect your production environment in May, you see the **Preview** label. You might be able to see the feature in a preview environment, or you might see a deprecation topic that has a future deletion date.

### Search the Summary View and the Details View

To search in either the summary view or the details view, type your search text in the *Header Search* box and press *Enter*. The search scope differs:

- When you search in the summary view, the framework searches all release notes that you filter into the table. It allows you to limit your search to release notes in a version, for example. You control the scope with the filter.
- When you search in the details view, the framework searches all release notes in the table of contents. It is a more comprehensive search.

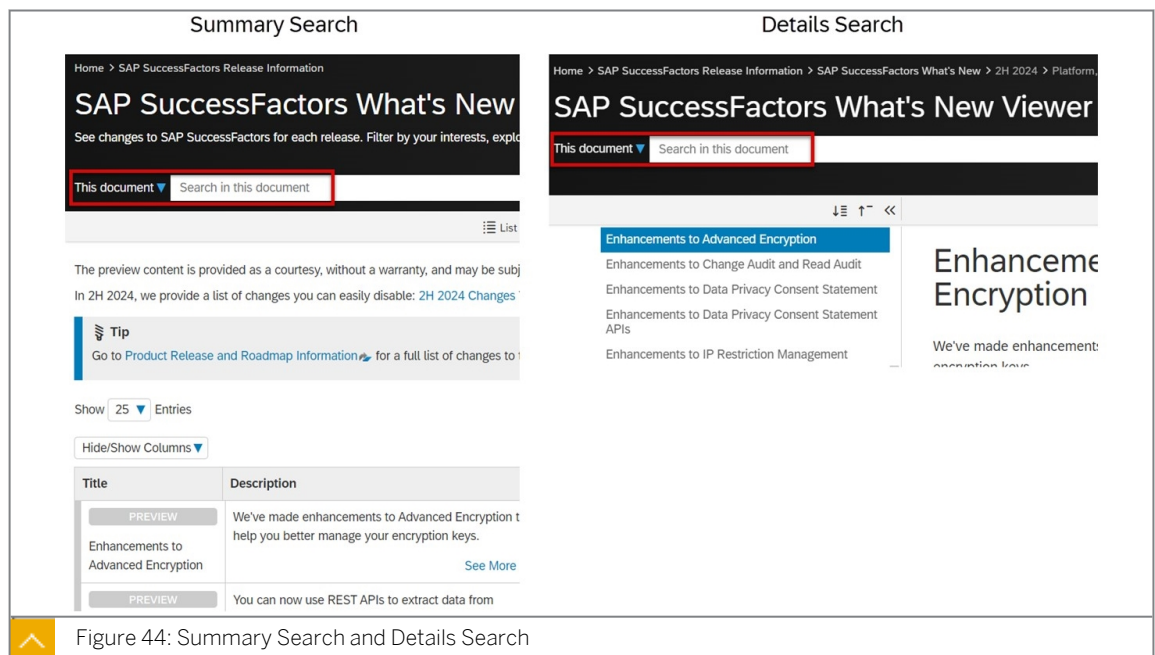

Figure 44: Summary Search and Details Search

### Filtering the What's New Viewer Summary View

You can select values in drop-down menus to filter the table to see content that matches. For example, you can choose *Compensation* in the *Product* list to see all changes that affect the Compensation product. You can also select more than one choice in the list – more than one product, for example. If you select multiple choices, the What's New Viewer makes a logical OR connection. For example, if you choose *Compensation* and *Learning* in the *Product* list, you see all changes that impact either the Compensation OR Learning products.

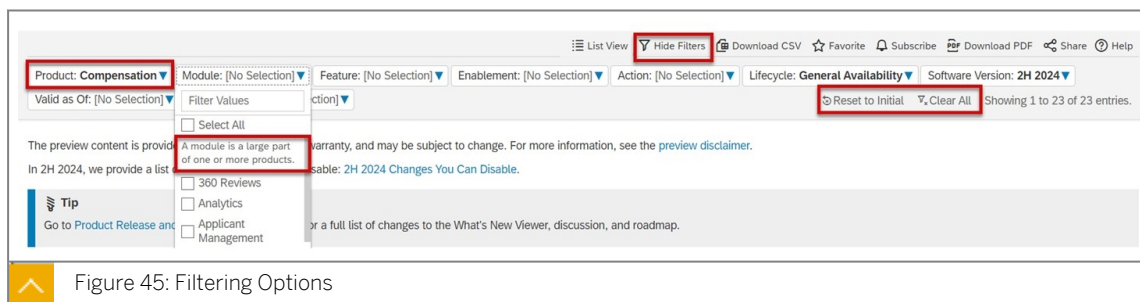

Figure 45: Filtering Options

You can also combine lists. For example, you can select *Compensation* in the *Product* list and *General Availability* in the *Lifecycle* list. When you combine lists, the filter uses a logical AND. You see all changes that affect Compensation AND that are Generally Available. You wouldn't, for example, see all generally available changes in all products.

If you don't know what a filter category means, you can see a definition if you open the menu.

The What's New Viewer includes filtering shortcuts:

- *Reset to Initial* clears your current filter choices and returns the filters to their default selections. In SAP SuccessFactors, the only initial filter is *Software Version*. We default the summary view to filter out past versions.
- *Clear All* clears all selections for all filters.
- *Hide/Show Filters* hides and shows filters. It's useful for small screens. After you make selections, you can hide the filter row.

### Filters and Their Values

We include filter categories and the members of the category so that you can filter the release notes to what you want to see.

- Product, Module, and Feature influence the parts of the product. Use them to narrow down changes based on the part of SAP SuccessFactors that we changed.
  - [The Product Filter Is the Licensed Application or Solution | SAP Help Portal](#)
  - [SAP SuccessFactors Modules Are Areas of Products | SAP Help Portal](#)
  - [SAP SuccessFactors Features are a Minor Filter | SAP Help Portal](#)
- Enablement, Action, and Lifecycle describe the level and type of disruption you should expect from the change.
  - [The Enablement Filter Describes Configuration Work | SAP Help Portal](#)
  - [The Action Filter Describes Your Action to Avoid Disruption | SAP Help Portal](#)
  - [Lifecycle Describes the Development Lifecycle Phase of the Software | SAP Help Portal](#)
- Software Version, Valid as Of, and Latest Revision describe when a change happened.
  - [How to Combine Software Version, Valid as Of, and Latest Revision | SAP Help Portal](#)
  - [Valid as Of Is the Production Date | SAP Help Portal](#)
- Feature, Major or Minor, and Type are minor filters in the What's New Viewer.

- A minor filter can still be important to your business process but isn't broadly important across all customers.
- [SAP SuccessFactors Minor Filters | SAP Help Portal](#)

SAP has special values for all filter categories:

- **Unavailable** means that no one at SAP has looked at the value to set it. You usually see Unavailable for technical reasons.
- **Not applicable** means that SAP has looked at the value and that none of the values in the enumerated list apply. Read the text of the details to understand why you see Not applicable.

[What's New Special Filter Values of "Unavailable" and "Not Applicable" | SAP Help Portal](#)

## Saving Views and Sharing

We make the What's New Viewer for sharing, so it has features that help you send filtered copies of the summary view. You can personalize the summary view for yourself and different audiences.

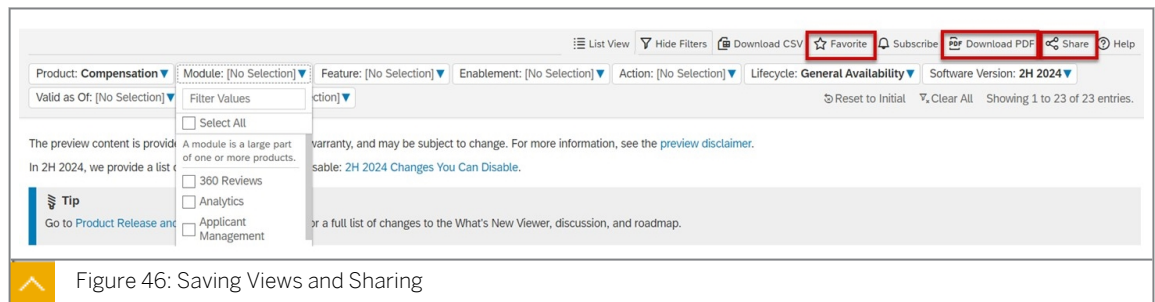

Figure 46: Saving Views and Sharing

Consider creating favorite filters for different audiences. For example, if you have multiple products in your organization, consider saving a Compensation filter for your Compensation business owners and a Learning filter for your Learning business owners. When the Compensation team asks you what's new for Compensation, you can, with one click, get to your filter. Or, consider creating a Deprecation and Deletion saved filter. When you need to check things that we're retiring, you can recall the filter.

To create a saved filter, log into the *SAP Help Portal*. Next, make your filter selections (for example, *Compensation OR Learning AND Generally Available*). Finally, select *Favorite* and then follow the on-screen prompts.

Hint:

We recommend renaming the filter to something that makes sense for you. For example, **What's Generally Available for Compensation and Learning this release.**

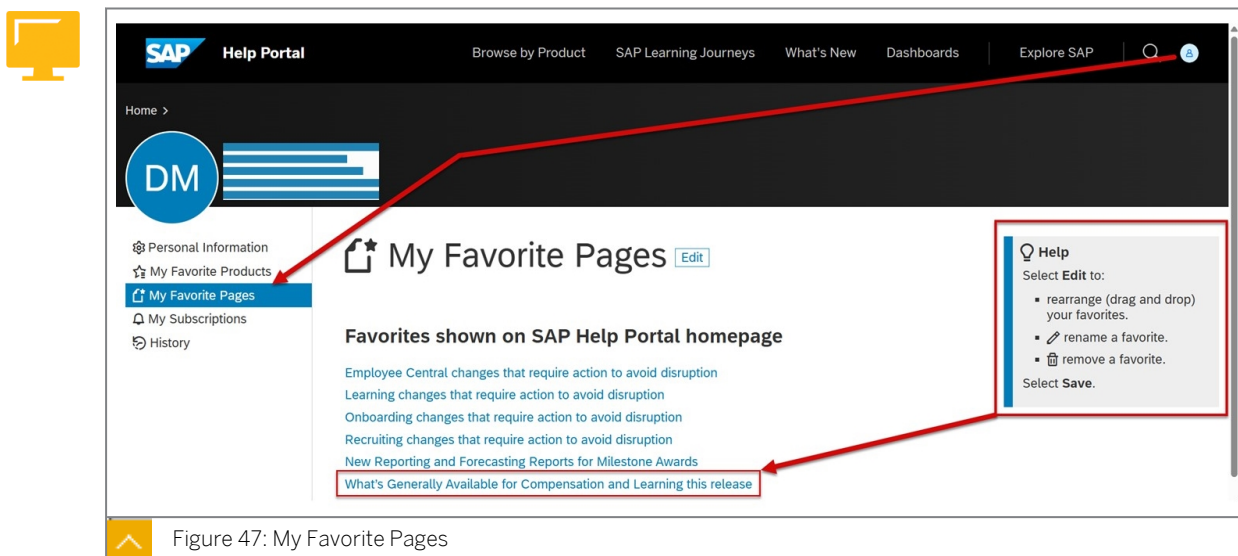

Figure 47: My Favorite Pages

To share your filter selections, select *Share*. Sharing is helpful if you need a colleague to see a smaller set of changes. You can:

- Go to *My Favorite Pages*, load a saved filter, and share it.
- Make original filter selections and share them.

When you use the *Share* button, you send a URL to the web page, so the person receives a link to a dynamic web page. If, however, you want to share a static list, select the *Download PDF* button. You might want a PDF of the summary table, for example, if you are concerned that a recipient might accidentally change the filters and want to be sure that they see the exact set you want them to see.

#### Caution:

When you export the table summary view in a PDF or CSV, you export the rows and columns in your current view.

## Related Links

[Filtering Online with the What's New Viewer | SAP Help Portal](#)

[Saving Your Filters in What's New Viewer | SAP Help Portal](#)

## Changing the Results List in the Summary View

You can change the view of the summary view by changing the page size, the columns you show or hide, and the sorting by column (ascending or descending). By default, the page size is 25 rows. To change the page size, change the number in the *Show Entries* list.

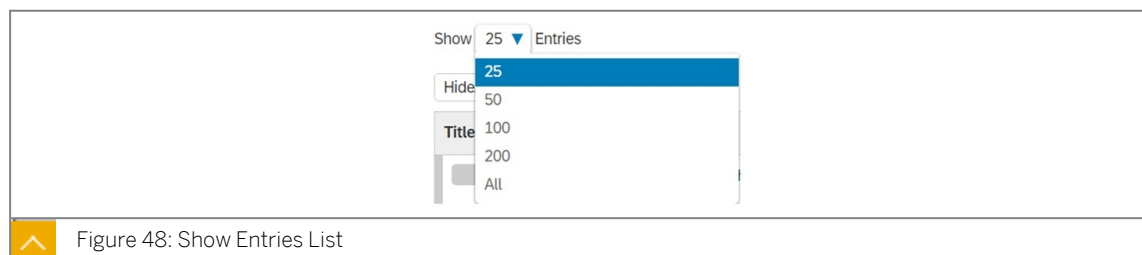

Figure 48: Show Entries List

By default, we show the most common columns in the table. To change the columns you see, select *Hide/Show Columns*.

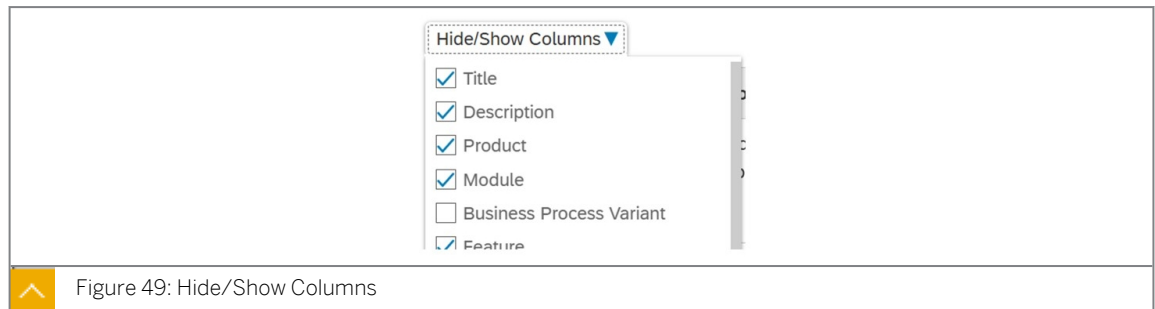

Figure 49: Hide/Show Columns

The default sort of the table is by product, then module, then feature. You can change the sort or sort order by selecting a column header. If you select a subscription link, it is sorted by the latest revision.

### Downloading the Summary View

You can download the summary table view as a PDF or CSV file.

- Download the CSV file so you can open the summary rows of What's New Viewer in a spreadsheet and edit the table.
  - Select *Download CSV* to download a delimited file and then choose a delimiter – some geographic locations work better with different delimiters.
  - The *See More* links automatically download.
  - The number of columns and rows you download is determined by your current view, so select all in *Show Entries and All Columns* in the table view.
- Download a PDF of the summary table if you want a read-only copy.
  - Select *Download PDF* in the summary table view.
  - Consider creating a custom PDF of the detailed document view.

### Related Links

[Downloading What's New Changes in a Delimited File | SAP Help Portal](#)

[Downloading Custom PDF Documents from What's New Viewer | SAP Help Portal](#)

### Navigating the What's New Viewer Details View

The details view is arranged like any other content in the SAP Help Portal. It has a table of contents, sections, search, etc.

- On the left, you see a table of contents that allows you to browse the details view.
- In the toolbar, you see options to save the page as a release note, to download a PDF of the document, or to share the URL to this page.
- On the right, you can jump to sections of the page.

Figure 50: Navigating the Details View

A release note is a technical announcement of each change we make. Each release note is a single page in the details view. You can find more marketing-focused content on SAP's main website; when relevant, we link to it. However, the What's New Viewer pages give you the technical details of a change.

### Summary Paragraphs

At the top of each page (stamped 1 and 2 below), you see the title and a short description. It's the same title and short description you read in the summary view before you select the *See More* link. We repeat it so that you know you're in the right place.

If the change is simple, you might just see the title and short description, along with later sections like Configuration Requirements or Technical Details. But if the change is bigger, we briefly explain the purpose of the change, maybe provide more details, and tell you why we are changing the software now. We might also include screenshots to describe the change.

Figure 51: Summary Paragraphs

### Role-Based Permissions

If you need role-based permissions to configure or see the change, we include the permissions in a section called **Role-Based Permission Prerequisites**. If you don't see the section, it's because there are no permission prerequisites.

## Role-Based Permission Prerequisites

You have the **Administrator Permissions > Manage Opportunity Marketplace > Manage Intelligent Recommendations in Opportunity Marketplace** permission.

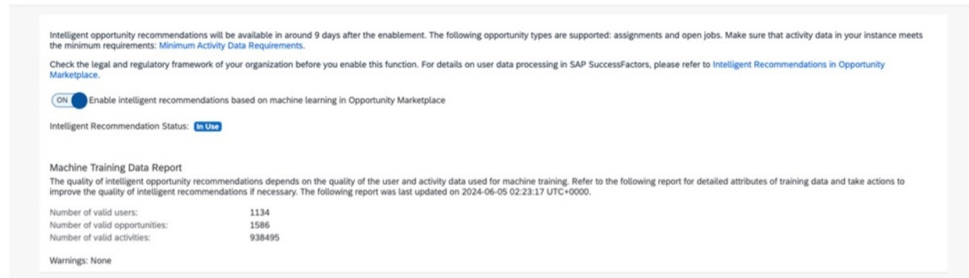

Figure 52: Example of Role-Based Permission Prerequisites Section

### What's Changed Section

When it makes sense for the release note, you see a before and after screenshot in the **What's Changed** section. Sometimes the change isn't visual (changes to an API, for example), so you won't see screenshots. Sometimes the screen is new, so there is no before screenshot.

### What's Changed

How It Looks Now

In the current version, the machine training data report is added to **Manage Intelligent Recommendations in Opportunity Marketplace**.

How It Looked Before

In the previous version, there was no machine training data report available.

### Configuration Requirements

The **Configuration Requirements** section (stamped 1 below) explains the scope of the configuration, including unexpected behavior or the consequences of the configuration. It is a basic summary of configuration and not full configuration help. You can find full configuration help in the related links (stamped 2 below). Requirements for the configuration can include things like:

- Prerequisites that must be in place before you can configure the change, enhancement, or feature. They are usually outside your control – for example, a provisioning switch or an integration package.
- Impacts that you might not expect. For example, if you configure the change, you may not be able to return to a previous configuration.
- What happens if you don't act? For example, if you don't include the release note in your change management, you run the risk of a changed business process.
- Restrictions of the change. Restrictions are expectations that the software doesn't meet yet. For example, maybe it only works when the language is English, or it only works in particular browsers for now.
- How to opt-out of the change.

## Technical Details

The **Technical Details** section repeats the values in the summary table. Select the links in the left column to read definitions of what we mean in the row. For example, select *Module* to see how we define module. If you see an empty value, it's empty on purpose. For example, we don't always have demo videos for our release notes.

## How to Find Corrections

You have three ways to find corrections to the What's New Viewer:

- If you subscribe, we push a list of changes to your email inbox.

- You can sort or filter by **Revision Date** in the summary view.
- If you are in a details page, you can look for the change note that describes the change, and you can look for the Latest Revision date.

When SAP SuccessFactors makes a mistake, we want to be transparent about it. You'll find a change note that describes the change and an updated Latest Revision date. The new revision date triggers the subscription email.

You won't find change notes or revision date changes for minor changes, including typos. We only update the revision date when the changes affect your change management processes.

You also won't find a revision when we enhance something we've already released. For example, if we enhance Writing Assistant in 1H 2024 and then again in 2H 2024, we wouldn't go back and update the 1H 2024 release note.

### How to Find Changes that Require Action to Avoid Disruption

Although you know your system best, SAP SuccessFactors can predict disruption that requires action. We use the **Action** value to express the likelihood of disruption:

- **Required** typically means a high likelihood of disruption, up to and including technical disruption. For example, your action can be required to avoid an outage because of the change.
- **Recommended** means that your current business processes can be disrupted unless you act. Often, this means retraining or change management.
- **Info-Only** means there is little need for action to avoid the disruption.

When looking at change management, prioritize Required and Recommended. Read the details to understand what sorts of disruptions are possible.

Deprecations are a unique disruption, so we announce deprecation with the **Lifecycle** value:

- **Deprecated** means that something in the software is on the way to being removed. For example, we might replace an old framework with a new one that performs better.
- **Deleted** means the thing is no longer accessible in the software. We keep deletion announcements in the What's New Viewer so that you can look up when things were removed.

We are careful not to overwhelm you with deprecation announcements. We don't, for example, make deprecation announcements for the normal enhancement of a feature. For example, if we add machine learning reports to a page, we don't deprecate the old page. It's an enhancement to the existing page.

### How to Scope Configuration Work

Some of our changes require configuration, and some don't. We use the **Enablement** value to describe work:

- **Automatically on** means you do not need to configure anything to get value from the change.
- **Customer Configured, Contact Enablement Partner**, or other values mean that you must do some work to get value from the change.

### Summary

- The SAP SuccessFactors HCM Customer Community is your one-stop shop for product support, Q&A, training, and expert accreditation (SFX), Product Release & Road Map information and other helpful information.
- The What's New Viewer helps people who maintain business processes and configure enhancements for their organizations.

### LESSON SUMMARY

You should now be able to:

- Review additional resources after completing this course.
